Rates Finally Look Past War Headlines. Unfortunately, They Looked Up

While they're not yet back to the recent long term highs seen on May 19th, mortgage rates surged to 2-week highs on Friday after an exceptionally strong jobs report. This is a bit out of character based on recent norms.

Over the past three months, mortgage rate movement has been driven primarily by developments in the Iran war. It's not that war, itself, is a consideration, but rather the implications for fuel prices and inflation. Bonds care deeply about inflation and interest rates are based directly on bonds.

When inflation isn't raging (or at the risk of raging), rates/bonds spend most of their time thinking about the economy. Lately, the data has been sufficiently even-keeled that it hasn't had enough of an impact to override the war's inflation-related volatility, but Friday's jobs report was an exception.

The jobs report is always the biggest consideration when it comes to monthly economic reports, but like other data, its impact had been limited of late. This particular report was so unequivocally strong that it sent shockwaves throughout the entire market.

Job growth crushed the forecast of 85k for the month of May by surging to 172k. If that been an isolated phenomenon, the market might not have cared too much, but the revisions to the past 2 months completely changed the market's understanding of the present labor market.

Back in April, the jobs numbers for March came out at 178k--very high, but at the time, an isolated outlier in a sea of mediocre data. Then in early May, April's job count fell to 115k and the market remained indifferent to the data.

Jobs data is always revised for the trailing 2 months as additional survey responses come in late. In this week's case, that resulted in hefty upward revisions. The 178k from March became 214k and April's 115k became 179k.

With that, in a single moment, the labor market went from looking like it was in a general downtrend to a firm show of support. Some would even say there's re-acceleration.

The choice of description doesn't matter. To the market, it was a compelling argument that the Fed is in no position to consider rate cuts, regardless of the Iran war and, if anything, is far more likely to consider rate hikes later this year.

MBS and Treasury

	Price / Yield	Change
MBS UMBS 6.0	99.58	+0.48
10 YR Treasury	4.9238	-0.1198
30 YR Treasury	5.3131	-0.0931

Pricing as of: 11/20 3:54PM EST
