Mortgage Rates Are Even Higher Than You've Been Told

First off, I apologize. You're right. How would I know exactly what you've been told about [mortgage rates](#) today? I can only draw the same sort of general conclusion that is so frequently drawn on Thursdays during weeks with lots of rate volatility.

The conclusion is that there is an abundance of mortgage rate coverage hitting the presses today suggesting rates are "only" up about .2% from 6.12 to 6.32. We know that much is true because that's the change published in today's Freddie Mac survey. News media and even the housing/mortgage industries rely heavily on Freddie's survey to provide an authoritative weekly update on rates.

Freddie's survey isn't bad or inaccurate. It's just stale. Due to its methodology, it is essentially a measure of this past Monday's rates versus the previous Monday, but not reported until Thursday. At that point, news organizations write their stories on rates and consumers read the coverage on Thursday afternoon or Friday morning.

Unfortunately, the media coverage gives consumers the impression that rates are still where they were on Monday. They're not... Mortgage rates can change much more quickly than many people realize, and the past few weeks have been great examples.

In fact, it was EXACTLY 2 weeks ago (Thursday, Feb 2) that the average lender could offer 5.99% on a top notch conventional 30yr fixed mortgage. Today, that same lender would be closer to 6.75-6.875%.

This is an incredibly abrupt move at almost any other time in the past several decades. The only reason we're not freaking out is that this sort of volatility has been common at times over the past year. Moreover, the most recent highs saw rates well into the 7% range, so if we're still in the 6's, rising rate headlines don't have a ton of shock value.

So don't be shocked, but do be aware that rates are quickly closing in on 7% again.

But why?

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	6.86%	-0.05	0.00
15 Yr. Fixed	6.31%	-0.02	0.00
30 Yr. FHA	6.32%	-0.06	0.00
30 Yr. Jumbo	7.04%	-0.03	0.00
5/1 ARM	6.53%	-0.02	0.00

Freddie Mac

30 Yr. Fixed	6.78%	-0.08	0.00
15 Yr. Fixed	6.07%	-0.09	0.00

Mortgage Bankers Assoc.

30 Yr. Fixed	7.00%	-0.03	0.60
15 Yr. Fixed	6.63%	+0.07	0.61
30 Yr. FHA	6.87%	-0.03	0.92
30 Yr. Jumbo	7.13%	+0.02	0.38
5/1 ARM	6.22%	-0.16	0.60

Rates as of: 7/26

MBS and Treasury Market Data

	Price / Yield	Change
MBS UMBS 5.5	99.68	+0.27
MBS GNMA 5.5	99.98	+0.13
10 YR Treasury	4.1958	-0.0474
30 YR Treasury	4.4523	-0.0305

Pricing as of: 7/26 5:59PM EST

We've discussed this quite a bit this week and tomorrow's coverage will discuss it again, but to recap (and provide a sneak peek), it all has to do with data and the Fed's reaction to it. Specifically, the rate market was more optimistic than it should have been according to the Fed. After the jobs report on Feb 3 and inflation data on Feb 14, the market has quickly been moving to fall in line with the Fed's higher rate expectations.
