Don't Believe Everything You Read About Mortgage Rates

Every Thursday, Freddie Mac releases its weekly mortgage rate survey. It's subsequently used as an authoritative primary source for most major media outlets. That's not **usually** a problem, but this week could be an exception.

First thing's first: over time, Freddie's weekly rate survey (officially, the "Primary Mortgage Market Survey") is **incredibly accurate**. For broad, analytical purposes, it does a perfect job of conveying bigger-picture mortgage rate movement. That's great for market analysts who are studying long-term trends, but the data runs the risk of being stale if you have timely needs.

Naturally, consumers who click on news stories about mortgage rates tend to have timely needs! Fortunately, Freddie's numbers **won't appear** stale if markets are calm.

Unfortunately, markets have been **anything but calm** for the past few weeks, causing Freddie's numbers to lag interest rate reality. The problem is compounded by the fact that Freddie's survey responses only come in during the first 3 days of the week (Thursday and Friday are never counted).

Last Thursday, Freddie reported rates as "unchanged," whereas actual rates rose at their **fastest weekly pace since November 2015!** As such, we would be justified in expecting a sharp increase in this week's Freddie survey. Instead, it rose by a modest 0.05%! That's only about a quarter of the actual move from the recent lows.

While the smaller-than-expected increase in Freddie's survey numbers is likely a **byproduct of the 3-day weekend**, that's of little help to consumers who are seeing one thing in the news and then being told another by their mortgage professional. Rest-assured, as of Wednesday, rates were the highest they've been in more than 4 months.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

Rates as of: 6/28

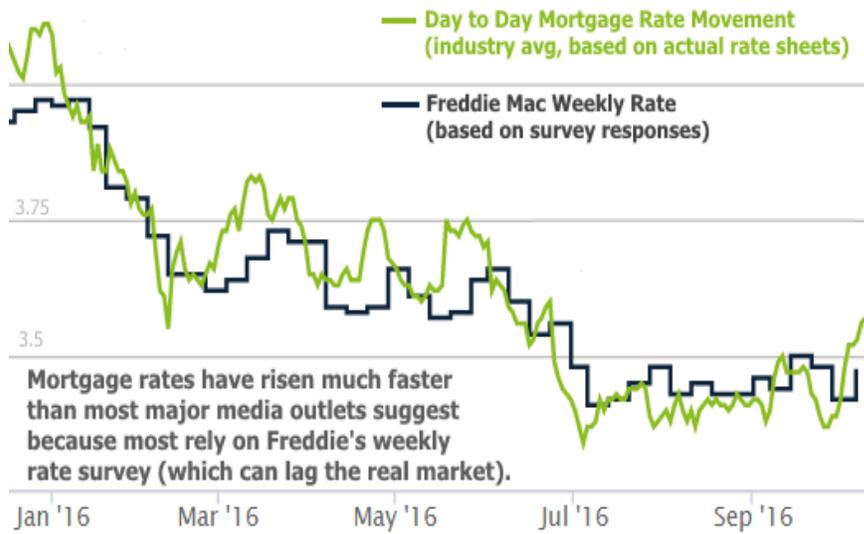

Market Data

	Price / Yield	Change
MBS UMBS 6.0	100.09	-0.08
MBS GNMA 6.0	100.23	-0.10
10 YR Treasury	4.4385	+0.0405
30 YR Treasury	4.5957	+0.0317

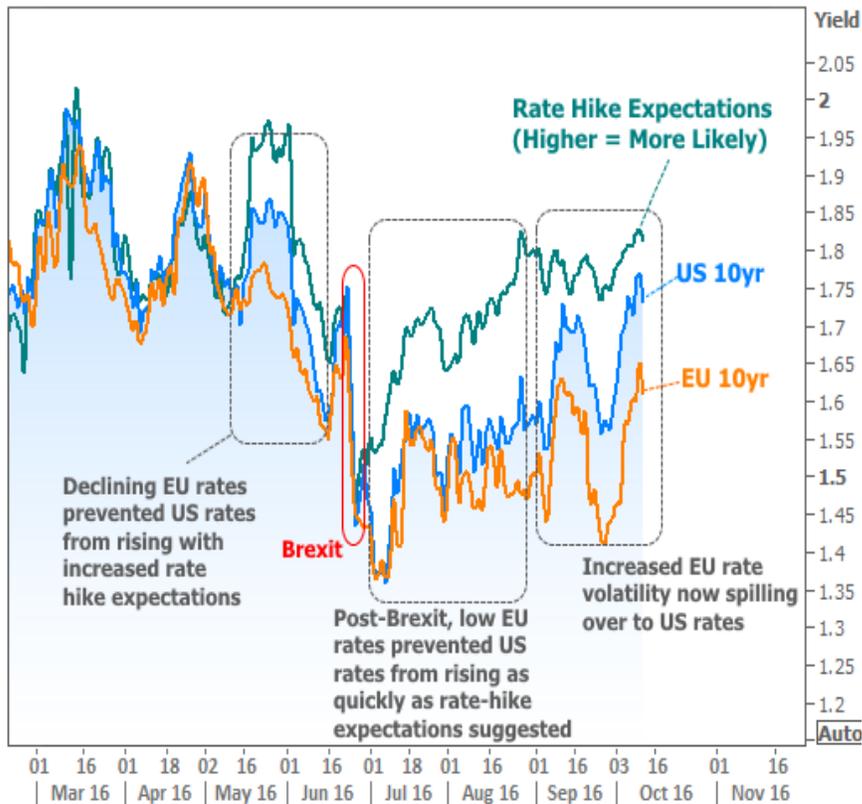

Pricing as of: 7/1 8:54AM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

The motivations for the most recent rate spike are **diverse** and potentially even **debatable**. There are 2 distinct camps though. One camp sees rates moving higher as a result of Fed rate hike expectations. The other focuses more on global central bank stimulus expectations (last week's newsletter discussed this in detail). The truth is probably somewhere in between these two camps, and the following chart supports that conclusion.

In the chart, the **higher** the green line, the **more** markets are expecting a Fed rate hike. Notice the strong correlation between US rates, EU rates, and rate hike expectations earlier in the year. Fed rate hike rhetoric strengthened in May, causing expectations to spike, but longer term rates (like 10yr Treasuries and mortgage rates) didn't follow because global markets were already buzzing about Brexit (the UK's vote to leave the European Union).

Post-Brexit, US rates have been **less willing to chase** the bounce in Fed rate hike expectations, despite clearly feeling some pressure (as seen in July/Aug, when the blue line inched higher relative to the orange line). Once European rate volatility increased, US rates have had freer rein to follow domestic motivations. This trend toward higher rates can continue if European rates keep moving gradually higher, but that's a big "if."

Bottom line: the Fed isn't the only source of inspiration for rate movement right now. The next few months bring significant risks to the outlook. These include **2 opportunities** for the Fed to hike rates and a **high likelihood** of the European Central Bank specifically addressing its asset purchase plans (the original source of the current rate spike).

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
