Housing Data Already Reflecting Rate Spike? This Time Might Be Different

The timing of 2016's massive spike in interest rates sets us up to see a **big shift** in the tone of housing and mortgage-related data in 2017. There is already a wide variety of opinions on the matter--most of them fairly dire. How warranted are they?

When something in financial markets (including housing and mortgages) has been "good" for a long time, it's natural to wonder when that might change. Even before rates spiked at the end of 2016, several major reports on home prices and sales suggested things **might be leveling-off**. The rate spike only validates the concern.

In other words, if we were already wondering if prices, sales, and mortgage applications might be taking a turn for the worse, doesn't the rate spike essentially **seal the deal?**

Yes, no, and maybe.

Here's what we know for sure. Rising rates have **already** taken a noticeable toll on mortgage applications. While there was no new MBA application data this week, we've already seen enough evidence of the correlation. Beyond that, refi applications are always the first thing to fall when rates move higher.

At the end of November, Freddie Mac said that mortgage activity would be **"crushed"** by rising rates. Freddie's economists cited the 2013 taper tantrum as precedent for said crushing.

Freddie failed to account for the fact that refi applications were almost twice as high before the taper tantrum than they were before the election. In other words, we **don't have as far to fall** before getting to the bottom of the long-term range. Yes, applications will be just as scarce at current rates, but much of the shift may have already happened.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00
Freddie Mac			
30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

Rates as of: 6/28

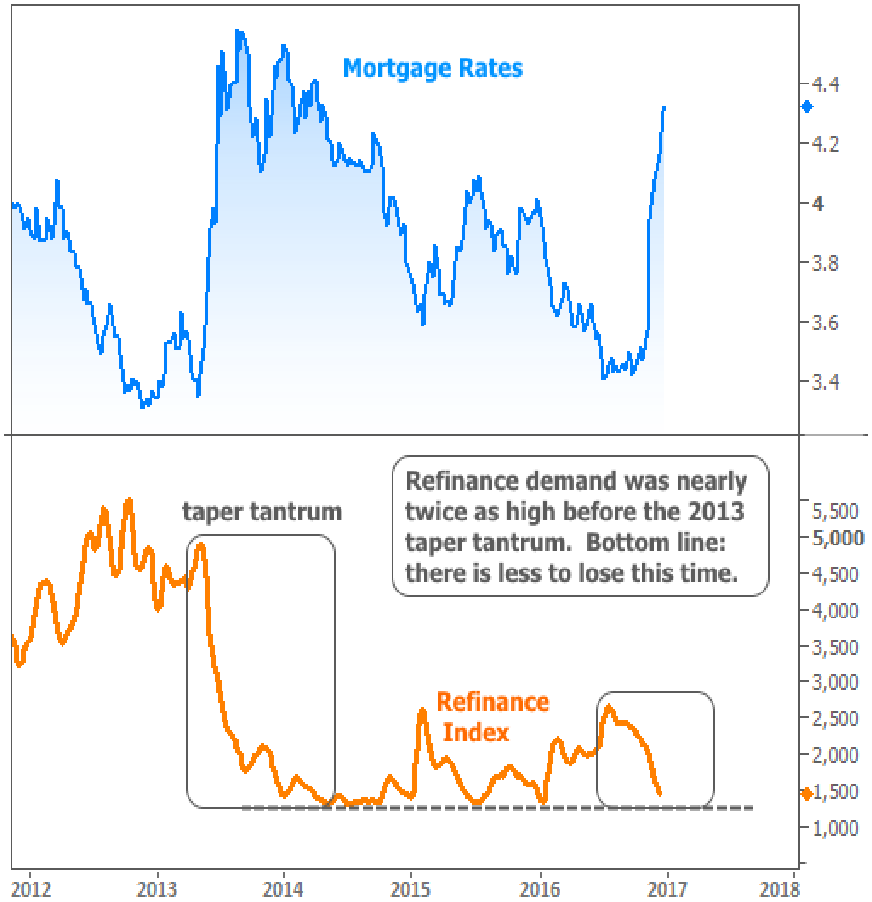
Market Data

	Price / Yield	Change
MBS UMBS 6.0	100.06	-0.11
MBS GNMA 6.0	100.23	-0.10
10 YR Treasury	4.4400	+0.0420
30 YR Treasury	4.5966	+0.0326

Pricing as of: 7/1 8:55AM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

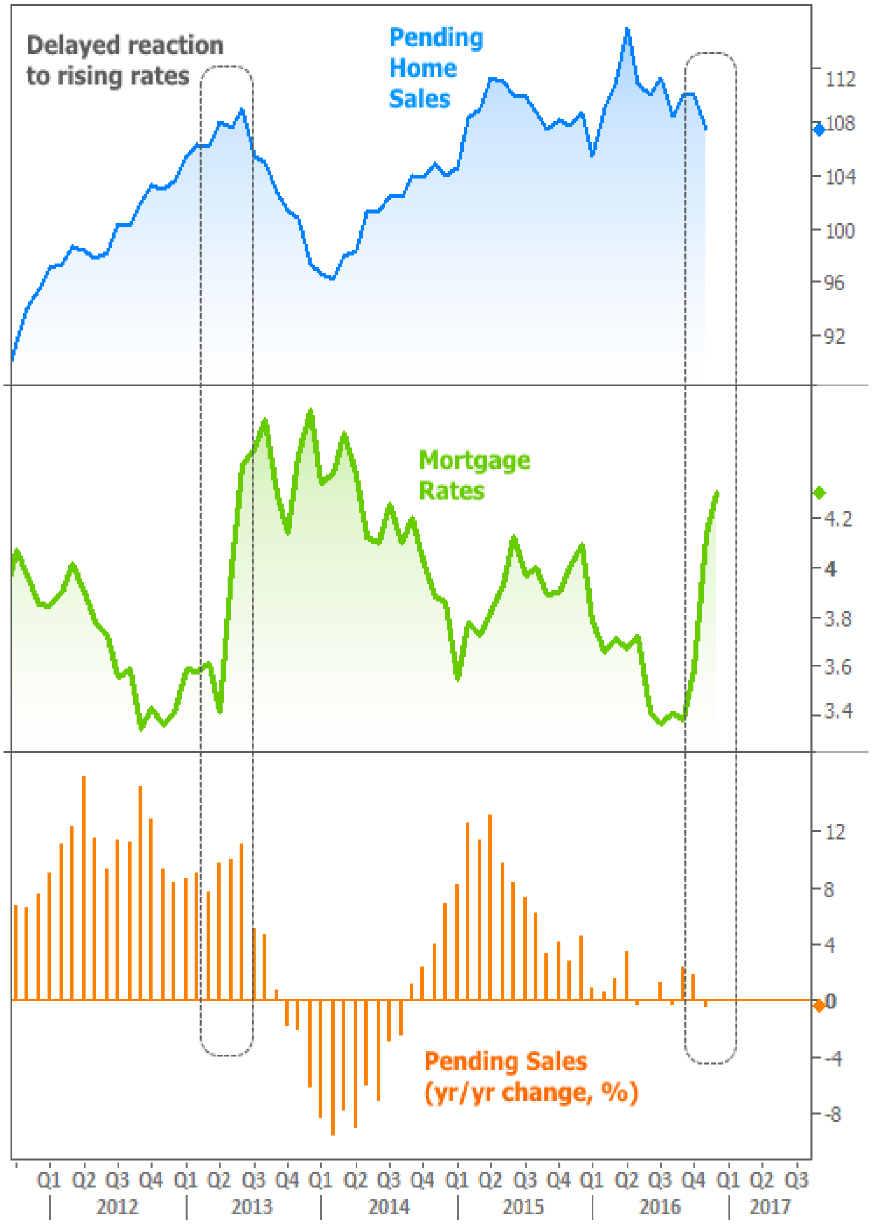


Less obvious and less immediate (and more contentious among pundits!) is the **effect on home sales**. Different reports speak to different aspects of home sales. Some are more timely than others. For instance, last week's Existing Home Sales report covered closed transactions in November. These **wouldn't** have been affected by the rate spike.

While it's true that rates have a far smaller impact on purchases compared to refis, there's **definitely** an effect. This time is no different, and this week's Pending Home Sales data from the National Association of Realtors already claims the "brisk upswing in mortgage rates" has "dispirited some would-be buyers."

The Pending Sales report is **much more timely** than Existing Sales, because it covers contract signings as opposed to closings. If any major report would show the effects of the rate spike, it's this one.

To be sure, **further declines in sales** are coming, but it remains to be seen if those declines are as sharp as they were in 2013. We enter the current rate spike with sales **already** stagnating (notice the flat year-over-year change in the chart below) and a well-established home price recovery. Contrast that to early 2013 when sales expanding quickly and prices were just showing signs of lift-off.



You might be noticing a theme here. Both in terms of refi applications and home sales, things were humming along at a much nicer pace before the taper tantrum. Coupled with fear that home prices wouldn't make a fuller recovery, we had more to lose. A **sharper correction made sense**. Because of this, 2017 is more of a wild card than a guaranteed "crushing" for mortgage activity.

Very Important

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is “your rates sound too good to be true”. Well they’re not, and here is why…

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It’s simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It’s just a lie that the big box mortgage companies have been telling you for years. Don’t believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
