## Making Sense of Lower Mortgage Rates Despite Fed Rate Hike

The relationship between "Fed rate hikes" and mortgage rates can be confusing at first glance. After all, mortgage rates moved lower in the days and weeks following the past 3 Fed rate hikes. While they aren't necessarily repeating the same pattern this time around, mortgage rates were nonetheless **unfazed** by this week's Fed hike.

Average Mortgage Rates

This dichotomy exists for **2 main reasons**. The **first** is more objective and basic. It has to do with the structure of the bond market and the way the Fed hikes rates. Almost everything in the bond market (including mortgage rates) is free to move every day while the Fed Funds Rate can only move 8 times per year at scheduled meetings. This means mortgage rates can adjust for expected changes in the Fed Funds Rate **ahead of time**. That's why you see mortgage rates topping out heading into the last 3 Fed rate hikes. They were bracing for the expected impact.

## National Average Mortgage Rates

	Rate	Change	Points
<b>Mortgage News Daily</b>			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00
<b>Freddie Mac</b>			
30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

Rates as of: 6/28

## Market Data

	Price / Yield	Change
MBS UMBS 5.5	98.49	-0.45
MBS GNMA 5.5	99.10	-0.44
10 YR Treasury	4.4069	+0.0089
30 YR Treasury	4.5712	+0.0072

Pricing as of: 7/1 6:44AM EST

## Recent Housing Data

	Value	Change
Mortgage Apps	Jun 12 208.5	+15.58%
Building Permits	Mar 1.46M	-3.95%
Housing Starts	Mar 1.32M	-13.15%
New Home Sales	Mar 693K	+4.68%
Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

The **second** and **more important** reason is "duration" (how long a particular fixed-income investment will last). Fixed-income refers to securities that allow investors to pay upfront for the right to receive principal and interest payments on a "fixed" schedule. Although mortgage rates and the Fed Funds Rate are both part of the fixed-income market, they keep two very different schedules, and that's a big deal for investors.

Just imagine you're a bank who makes **2 loans today**: one that will be paid back in full tomorrow and one that will last roughly 7 years. You're probably not going to offer the same terms on these 2 loans! Multiply that concept by the trillions of dollars circulating in the bond market--ranging in duration from "overnight" to "decades" and you can quickly appreciate why short-term rates don't move in tandem with longer-term rates.

Simply put, long-term and short-term rates care about different things. Short-term investors (think under 2 years) will be in and out of the market well before several longer-term risks might be realized. Long-term rates, on the other hand, must consider what inflation, growth, and Fed policy might look like many years in the future! This is precisely why longer-term rates have been **able to move lower** recently as the outlook for inflation, economic growth, and Fed rate hikes has cooled relative to previous expectations

That last part ("relative to previous expectations") is important. It means investors don't necessarily see inflation, economic output, or the Fed Funds Rate falling outright, but rather, simply not living up to previous expectations. One **great way to observe** this phenomenon is to look at the relative change in Fed rate hike expectations for this September and next September versus the 10yr Treasury yield (a ubiquitous benchmark for long-term rates). The following chart shows that markets have increasingly come to terms with the 2017 rate hike outlook, but now think the Fed will be much slower to hike in 2018. Unsurprisingly, longer-term rates line up better with the longer-term rate hike outlook.

Another tacit implication of the chart above is that markets were well-aware that we'd see a Fed rate hike this week. As such, the hike itself was of little consequence. In fact, most of this week's downward movement in rates happened on Wednesday morning when key reports on inflation and retail sales fell well short of expectations. Traders figure the **Fed will have a hard time** sticking to its current rate hike trajectory if inflation and growth continue cooling. That's the nice way of putting it.

Some traders might say the Fed either has their collective **head in the sand** regarding the absence of convincing inflation. Others might say the Fed just isn't fully broadcasting its motivation for removing accommodation (i.e. raising rates and decreasing balance sheet reinvestments by the end of the year).

This quasi-conspiracy theory holds that the Fed **wants to get ahead** of the next economic downturn with rates high enough to cut, and a balance sheet small enough to expand. In the Fed's defense, they've fully admitted to this line of thinking, but have stopped short of including it in official policy verbiage (likely because it would do more harm than good to list "getting ready for an impending recession" as a driving force behind policy changes).

This latent belief that the Fed is a bit too optimistic (regardless of the reason) is consistent with interest rates' ability to **hold their ground** despite the fact that stocks continue to operate near record levels.

Rate Trend Remains Friendly

In housing-specific news, this week's economic data was generally **downbeat**. The National Association of Home Builders reported a drop in its [Housing Market Index](#) (a measure of builder confidence). In context, however, the index **doesn't** look like it's in trouble just yet.

NAHB Housing Market Index

It's harder to offer a compelling counterpoint for Friday's [New Residential Construction](#) data from the Census Bureau. Both Housing Starts and Builder Permits came in well below forecasts, prompting National Association of Realtors' Chief Economist to say "housing shortages look to intensify and may well turn into a **housing emergency** if the discrepancy between housing demand and housing supply widens further."

## Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

**Mike Baker**
