# Housing Market Weakness Depends on Perspective

This week's **biggest housing-related headline** was the drop to a 3-year low in Existing Home Sales. This is just the latest in a series of reports that suggests housing has turned some sort of scary corner. But drawing the line between fear and reality can be a matter of perspective.

Has housing data actually weakened in the past year? Undoubtedly! There's really **no denying or debating** that fact. But home sales dropped in a similar way in 2013 after the last comparable spike in interest rates only to go on to new long-term highs by the middle of 2015.

We can't really know if housing will recover in a similar way this time, and that's exactly the point! Nothing we've seen so far is much of a surprise in the context of the interest rate spike. In fact, if anything, the surprise is how well housing continued to do after the first phase of the rate spike in late 2016. It wasn't until the 2nd phase in 2018 that sales finally capitulated.

## National Average Mortgage Rates

|                   | Rate  | Change | Points |
|-------------------|-------|--------|--------|
| Mortgage News I   | Daily |        |        |
| 30 Yr. Fixed      | 7.07% | +0.02  | 0.00   |
| 15 Yr. Fixed      | 6.45% | 0.00   | 0.00   |
| 30 Yr. FHA        | 6.51% | +0.02  | 0.00   |
| 30 Yr. Jumbo      | 7.26% | 0.00   | 0.00   |
| 5/1 ARM           | 7.02% | -0.01  | 0.00   |
| Freddie Mac       |       |        |        |
| 30 Yr. Fixed      | 6.86% | -0.01  | 0.00   |
| 15 Yr. Fixed      | 6.16% | +0.03  | 0.00   |
| Rates as of: 6/28 |       |        |        |

#### Market Data

|                | Price / Yield | Change  |
|----------------|---------------|---------|
| MBS UMBS 5.5   | 98.49         | -0.45   |
| MBS GNMA 5.5   | 99.10         | -0.44   |
| 10 YR Treasury | 4.3961        | -0.0019 |
| 30 YR Treasury | 4.5659        | +0.0019 |

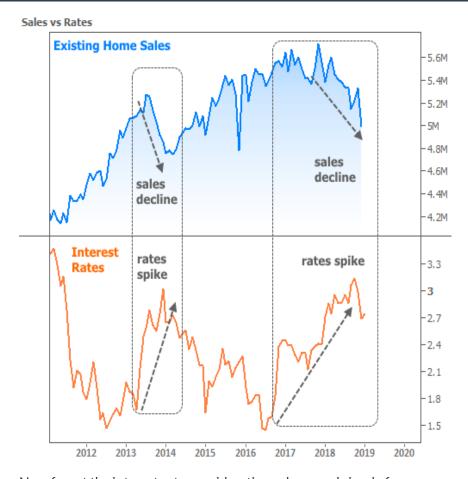

Pricing as of: 7/12:47AM EST

## **Recent Housing Data**

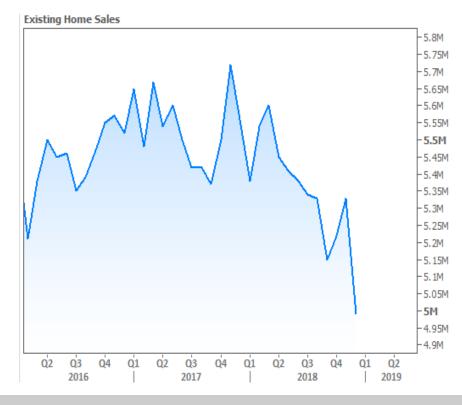

|                     |        | Value | Change  |
|---------------------|--------|-------|---------|
| Mortgage Apps       | Jun 12 | 208.5 | +15.58% |
| Building Permits    | Mar    | 1.46M | -3.95%  |
| Housing Starts      | Mar    | 1.32M | -13.15% |
| New Home Sales      | Mar    | 693K  | +4.68%  |
| Pending Home Sales  | Feb    | 75.6  | +1.75%  |
| Existing Home Sales | Feb    | 3.97M | -0.75%  |
| Builder Confidence  | Mar    | 51    | +6.25%  |

The interest rates provided in this newsletter are national averages from independent data sources. Rate/APR terms may differ from those listed above based on the creditworthiness of the borrower. All information provided "as is" for informational purposes only, not intended for trading purposes or financial advice.

Now forget the interest rate considerations above and simply focus on perspective and context. Just by changing the time period on the chart, we can paint **vastly different pictures**. The most downbeat pictures are those that compare current levels to the long-term highs seen in 2017.

Things change as we zoom out to wider points of view. This could still look a bit gloomy depending on your perspective, but much less so than the previous chart:

If we continue to zoom out, the longer-term trend emerges. In this chart, it's actually easier to make a case for housing market **strength**. The red line is a simple linear regression from before the 2000's housing boom. When sales are under that line, it signifies opportunity to improve. Additionally, it's reassuring to see that sales are **not** currently falling from one of their boom cycles (those have been the worst times for the housing market).

Perspective can have an impact on our assessment when it comes to home **prices** as well. The latest home price report from the FHFA (Fannie and Freddie's regulator) was also released this week. Home prices are commonly reported in terms of year-over-year change. This is a useful practice as it allows us to see changes in trends more easily. Here too, we see the ill effects of the 2013 and 2018 rate spikes as well as a potentially ominous ceiling blocking further progress.

But **let's ask ourselves** if we'd really want home prices to accelerate faster and faster when they've already spent several years in the 5-7% range. That doesn't sound sustainable in an economy where wage growth only recently made it back to 3%. Perhaps **more importantly**, let's ask ourselves why a drop in the pace of appreciation is a bad thing if prices are still moving up. For instance, here's what the same data looks like when we chart the outright level of FHFA's home price index.

The point of all this is to reiterate that different cases can be made simply by using different techniques to present the **exact same** data.

In financial markets, stocks and bonds/rates spent the first part of the week moving lower before bouncing on Friday as odds improved for a temporary re-opening of the government. The temporary nature of the solution likely accounts for the absence of a bigger market reaction. Neither stocks nor bonds were willing to move back to the levels seen after last week's trade-related news.

Next week brings **two key events** that were on the schedule regardless of the shutdown. The Federal Reserve will release an updated policy statement on Wednesday afternoon. They **won't** be raising rates at this meeting. In fact, many investors think we'll see the Fed strike a softer tone compared to December's announcement. Such things are usually good for rates, but if investors were in broad agreement about that likelihood, rates would have already benefited from those expectations.

Then on Friday, we'll get the next installment of the government's official jobs report--always one of the biggest potential sources of volatility for interest rates. As of Friday afternoon, the government hasn't announced a tentative schedule for releasing any of the data that had been on hold during the shutdown.

## **Real Talk**

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
