Big Bounce in Home Sales And What it Could Mean For Prices

It was an action-packed week for financial markets. Earnings were in full swing. There was a ton of economic data to digest. And of course, there was the Fed announcement and press conference to cause volatility from Wednesday afternoon on. But one of the most interesting developments was the **big bounce** in Pending Home Sales on Tuesday.

Pending Sales are an advance indicator of actual home sales because they track home purchase contract activity. As such, they often **lead** Existing Home Sales numbers by several weeks. Both pending and existing home sales **also** tend to lead home price appreciation, which has been **cooling significantly** in recent months.

In other words, if we're seeing a big bounce in Pending Sales, we're **likely to see a continuation** of the bounce in Existing Home Sales, and in turn, at least some stability in home price appreciation.

Of course, one of those "all things being equal" caveats applies, but generally speaking, if consumers are in a position to buy more and more homes, the conditions that support **stable-to-stronger** home prices are typically in place as well.

The **only catch** is that it can take quite a while for the stability in price appreciation to show up. This can be seen in the chart below where the most noticeable bounces in home sales tend to occur 8-10 months before we see a response in price trends (keep in mind, the blue line tracks home price CHANGE and not home prices themselves--i.e. as long as the line is above zero, prices are moving up).

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00

Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

Pending Sales vs Home Prices

By Wednesday, the big week of economic data and events was in full swing. A weak manufacturing report **pushed rates lower** in the morning and markets reacted favorably to the Fed announcement at 2pm. In this context, "favorably" means that the prices of both stocks and bonds increased (and when bond prices increase, yields/rates move lower).

In fact, both stocks and bonds have been actively trading their expectations for Fed policy all week. If the Fed is friendly, it's seen as a **rising tide** that lifts all boats. If the Fed is feeling less accommodative, both stocks and bonds **suffer**. The result is a breakdown of the typical correlation expected of stock prices and bond yields (aka "rates").

Rates vs Stocks

While the Fed announcement itself was helpful for both stocks and bonds, 30 minutes later, Fed Chair Powell delivered prepared remarks that **sent markets scrambling** in the other direction. The offending comments included

- A less dire assessment of foreign/global economic risks
- A "merely technical" classification of a policy change that markets may have misinterpreted as a sort of Fed rate cut
- Fair warning that the Fed might make adjustments to its balance sheet that favor shorter term interest rates at the expense of longer term rates (like 10yr Treasury yields and mortgages).

All of the above was enough for an immediate spike in bond yields and a quick reversal for the stock market as seen in the following chart.

This momentum carried through to the next trading day and it wasn't ultimately reversed for the bond market until the reaction to Friday morning's economic data.

Rates vs Stocks

If you pay exceptionally close attention to economic data you may be wondering how the apparently **strong** jobs report could possibly result in rates moving **lower**. After all, strong jobs numbers are usually bad for bonds/rates.

In this case, strong jobs growth is **old news** and traders are at least as interested in other parts of the report. Specifically, the **wage growth** component matters as much as anything these days due to its implications for inflation (which in turn matters because low inflation means the Fed can continue to be friendly). While the job tally was stronger-than-expected, wages and weekly hours were lower than expected. The implication is **bad for inflation**, which is already struggling, depending on the metric.

If we use inflation data that came out this week (Core PCE), we can see that it was already beginning to slide to 1.6% even though wages improved in 2018. If Friday's wage data speaks to a peak/plateau in wage growth, it doesn't bode well for inflation. The takeaway is that the Fed won't need to hike rates any time soon. Indeed, speculators see a **greater chance of a Fed rate CUT** being the next move in December or January.

Earnings vs Inflation

All of the above having been said, Friday's movement in Fed rate hike expectations was a **drop in the bucket** relative to the opposite movement of the previous 2 days. In the following chart, the orange line moves lower as markets perceive a greater chance of a Fed rate CUT.

Rates vs Rate Hike Expectations

With the last chart in mind, 10yr Treasury yields tried and failed to break below 2.50%. True, it did happen during the day on May 1st, but we wouldn't consider 2.50% to be 'broken' unless yields held under 2.50% through the close of business (and ideally for an additional business day). The implication is that **rates remain susceptible to volatility** in the coming weeks. Given all of the inflation implications underlying this week's volatility, next week's inflation data on Thursday and Friday could be more important than normal.

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
