Mortgage Market Still Waiting For Help

While some aspects of the housing/mortgage market have stabilized over the past few weeks, we're **still waiting** for some important guidance about the path ahead.

The [last few newsletters](#) are worth revisiting, but **here's a recap:**

- Lockdowns = unprecedented joblessness and unprecedented potential for missed mortgage payments.
- Mortgage servicers still have to pay mortgage investors. If they run out of money, Agencies (Fannie/Freddie/FHA/VA) foot the bill. If the forbearance load is big enough, several servicers could go out of business and agencies could run out of money.
- The relief bill guarantees forbearances for those who need them but doesn't guarantee funds will remain available for servicers/agencies.
- Mortgage investors expect the situation to be addressed, but until then, many have jacked up rates or completely pulled out of programs with more forbearance-related exposure.
- Even if the government says it has the mortgage industry's back, that would only take care of the biggest concern. Investors will still be cautious until they have a better sense of longer-term impacts.

Until then, expect to see the following problems persist:

Higher Mortgage Rates (Relatively).

Yes, mortgage rates are still historically low, but based on the trading levels seen in US Treasuries and mortgage bonds, they're much higher than they would normally be.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

Rates as of: 6/28

Market Data

	Price / Yield	Change
MBS UMBS 5.5	98.49	-0.45
MBS GNMA 5.5	99.10	-0.44
10 YR Treasury	4.3902	-0.0078
30 YR Treasury	4.5578	-0.0062

Pricing as of: 7/1 12:49AM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

It's one thing to see rates diverge from Treasuries. That definitely happens. The divergence between mortgage rates and mortgage bonds is even more telling. Nothing like this has ever happened--not even remotely close.

Higher Rate Volatility.

While volatility has died down significantly from 3 weeks ago, it's still much higher than normal. That means the rate you see in the morning could be very different in the afternoon. The differences can be even bigger from one day to the next. The true level of volatility isn't well-captured by most of the traditional sources. Granted, things have died down quite a bit, but the following chart gives you an idea of how under-reported the volatility can be.

The Return of Points.

Upfront "discount points" charged on a mortgage were more prevalent in the past but rarely made economic sense in recent years. Now they're the only option for many scenarios.

In the past, loans with significant risk-based cost adjustments (for things like low FICO, high loan-to-value, investment properties, cash-out, etc) would be quoted a higher rate because investors were willing to pay proportionately more for any given increase in the note rate. The higher price paid by investors would soak up those risk-based adjustments and the borrower wouldn't have to bring any extra money to the table.

But that's no longer the case. Investors aren't paying up for higher rates like they used to. No amount of extra interest is worth the extra upfront expense in their view. But the risk adjustments still have to be paid. So it falls to the borrower as an upfront cost. In other words, expect to see quotes with discount points for loans with several additional risk factors.

Speculation and Misinformation.

Tensions are running high everywhere. The mortgage industry is no exception. Not everyone is taking the time to vet sources or ask an expert before sharing info. For instance, one individual mortgage lender made some significant changes to its credit requirements last week. By Monday morning there were news stories and social media posts claiming (erroneously) the changes were industry-wide.

A Strange Mix of Fear and Hope.

The following chart tells two stories. On one hand, it shows the sharpest decline in new home construction in more than 30 years. On the other hand, it shows that construction merely returned to what were seen as high, stable levels less than a year ago.

Yes, like many economic reports, this one may get worse before it gets better, but that brings up an important point about "hope." Rather than agonize over a progressively worse recession that happens for reasons that are only well understood in hindsight, **we all know why this is happening** and no one would be surprised to see the economic data get even weaker before it gets better. That's why the stock market barely budes when staggeringly bad numbers are released these days. The drama is well understood.

The upside is that we've never been in a position where the entire planet is simultaneously planning on things getting better based on simple, widely available, easily understood facts. Whether it's due to an eventual vaccine, better testing/control/quarantine measures, or successful strategies for gradually reopening the economy, the recovery equation is simple. More people returning to work + less people getting sick = a rapidly improving economic picture.

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
