Refi Demand Surges as Mortgage Volatility Comes Roaring Back

It was easy to get lulled into complacency by the second half of 2020 when it came to mortgage rates. Even as other indicators said rates should be rising, they continued on a calm journey to multiple record lows. 2021 has been very different so far!

Covid and its impacts on the economy remain the driving forces behind market trends. That's generally been great for rates, but it also means that rates should gradually rise as we battle back against covid. If the onset of the pandemic pushed rates to all-time lows, it's **only fair** that progress against the pandemic would result in rates moving up from all-time lows.

If you ask 10yr Treasury yields, that's been the case for quite a while.

And while the stock market has been singing a similar tune, the mortgage market has been in its own glorious world with rates seemingly **oblivious** to Treasury trends.

National Average Mortgage Rates

Rate Change Points

Mortgage News Daily

30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00

Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

Mortgage rates and Treasuries typically follow each other in near lock-step. There are notable exceptions, but none have been as pronounced as 2020. Mortgages simply couldn't keep up with Treasuries on the way down. That left them with a **cushion** to absorb virtually all of that "push back" seen in the chart above.

In other words, that cushion allowed mortgage rates to move sideways or lower for months, even as Treasury yields moved higher. We've **warned repeatedly** that this was increasingly likely to change. Last week, it finally did.

Although there's technically still some cushion left, it's now too small to soak up bigger instances of volatility in Treasuries.

As last week's newsletter discussed ([get caught up here](#)), the Georgia senate election resulted in one of the **sharpest interest rate spikes** of the past few years. Granted, that's a fairly low bar to clear when rates have been doing so well over that time, but it nonetheless raised concerns about where we may be going next.

When rates rise this quickly, traders are on the lookout for additional weakness (and an opportunity to find a ceiling). That was the first order of business this week. No one wanted to be the first to catch that falling knife (big moves like this can create momentum that lasts for days/weeks, and **traders can get burned** if they bet on a rebound too quickly), but risks began to subside on Tuesday afternoon after a strong 10yr Treasury auction. Bonds didn't panic again for the rest of the week, leaving the bigger-picture impression that the early 2021 rate spike has stabilized.

You may have seen other news headlines that suggest it was a **bad** week for mortgage rates. It wasn't. That was **LAST** week. The headlines in question are based on stale information. By Friday afternoon, the average lender was offering rates that were at least as low as those seen last Friday.

The issue has to do with a popular weekly rate survey from industry giant Freddie Mac. The survey does a fine job capturing broad strokes over time, but is severely limited when it comes to timely day-to-day changes. In short, the survey is just now capturing **LAST WEEK'S** rate spike. Here's how daily rates have been moving by comparison (note: the green line is a bit higher because it includes refinances. Freddie just asks loan officers for their "best" rate, and in this market, that's always purchases).

30yr Fixed Mortgage Rates

Speaking of purchases and refis, this week's mortgage application data was **very interesting**. While you might expect a big rate spike to dissuade refi demand (and generally speaking, you'd be right), last week's rate spike motivated homeowners to get off the fence. The count of refi applications was the highest it's been since the 2 best weeks at the start of the pandemic.

Next week brings additional housing market data starting on Wednesday with another look at mortgage applications and a new report on builder confidence. Additional construction and sales data will be reported on Thursday and Friday. Bonds (and most mortgage lenders) will be closed on Monday in observance of Martin Luther King Jr. Day.

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
