## What Are Rates and Housing Worried About?

In the past 2 weeks, there's been big news about inflation and seemingly big news about Fed policy. Both are threats to low interest rates, but not just yet, apparently.

After taking last week's huge inflation numbers in stride ([read more...](#)), the bond market moved on to focus on Fed policy this week.

The Federal Reserve (aka, the Fed) is often a source of **confusion** for consumers when it comes to mortgage rates. The evening news says things like "the Fed kept rates unchanged," and people assume it has something to do with mortgage rates.

The Fed Funds Rate (the thing the Fed actually decides to hike, cut, or hold steady) has almost nothing to do with the mortgage market. Mortgage rates are infinitely more concerned with the Fed's **bond buying** policies.

Movement in the bond market is the **foundation** of day-to-day mortgage rate changes. Bonds can move for a variety of reasons, but the most reliable and most basic reason is "supply and demand." By acting as a massive buyer of bonds (including the bonds that directly underlie mortgages), the Fed increases demand relative to supply. Higher demand means higher bond prices, and higher bond prices equate to lower rates, all other things being equal.

In other words, Fed bond buying = lower rates, and they've been buying more than anyone for a long time. Ideally, the Fed won't need to do this forever, but **change is scary** when it refers to the Fed withdrawing support.

It was this sort of change that sparked the **taper tantrum** in 2013, which accounted for some of the most abrupt rate spikes in decades. Markets are understandably cautious about a repeat performance, and market participants **thought** they saw hints about tapering in Wednesday's Fed meeting minutes (a more detailed account of the meeting that took place 3 weeks ago).

But those comments were **nothing** like the discussion surrounding tapering in 2013. Back then, **multiple** Fed members were in agreement, and Bernanke (the Fed Chair at the time) was already on record discussing the conditions for tapering in specific terms.

## National Average Mortgage Rates

	Rate	Change	Points
<b>Mortgage News Daily</b>			
30 Yr. Fixed	7.07%	<b>+0.02</b>	0.00
15 Yr. Fixed	6.45%	<b>0.00</b>	0.00
30 Yr. FHA	6.51%	<b>+0.02</b>	0.00
30 Yr. Jumbo	7.26%	<b>0.00</b>	0.00
5/1 ARM	7.02%	<b>-0.01</b>	0.00

### Freddie Mac

30 Yr. Fixed	6.86%	<b>-0.01</b>	0.00
15 Yr. Fixed	6.16%	<b>+0.03</b>	0.00

Rates as of: 6/28

## Market Data

	Price / Yield	Change
MBS UMBS 5.5	98.49	<b>-0.45</b>
MBS GNMA 5.5	99.10	<b>-0.44</b>
10 YR Treasury	4.4074	<b>+0.0094</b>
30 YR Treasury	4.5726	<b>+0.0086</b>

Pricing as of: 6/30 8:41PM EST

## Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

This time around, the comments relating to tapering simply reiterated those from various Fed speeches in recent weeks. Not only is the Fed far from unanimous on this front, there's also a lot more uncertainty about when they'll pull the trigger.

Even then, to say the comments were highly conditional would be an **understatement**. See for yourself:

"A number of participants suggested that if the economy continued to make rapid progress toward the Committee's goals, it might be appropriate at some point in upcoming meetings to begin discussing a plan for adjusting the pace of asset purchases."

**Translation:** the Fed isn't even talking about tapering yet. There are just 4 Fed members who agree they **should** talk about it **in the future if** certain things happen. Pretty logical, actually... The market reaction ended up being logical as well: spooked at first, but quickly calming down.

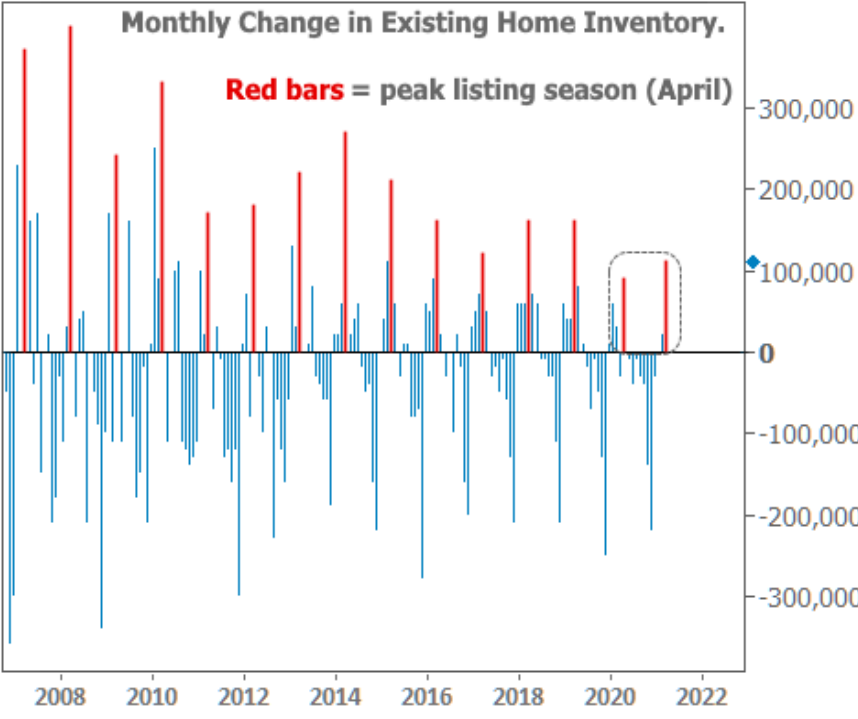

The Fed will need to see **several** months of strong economic data before any robust discussion of tapering. Even then, the pain of the taper tantrum in 2013 means that traders have been gradually getting in position for this discussion for many months. When the time comes, there will be much less to freak out about--at least as far as Fed bond buying is concerned.

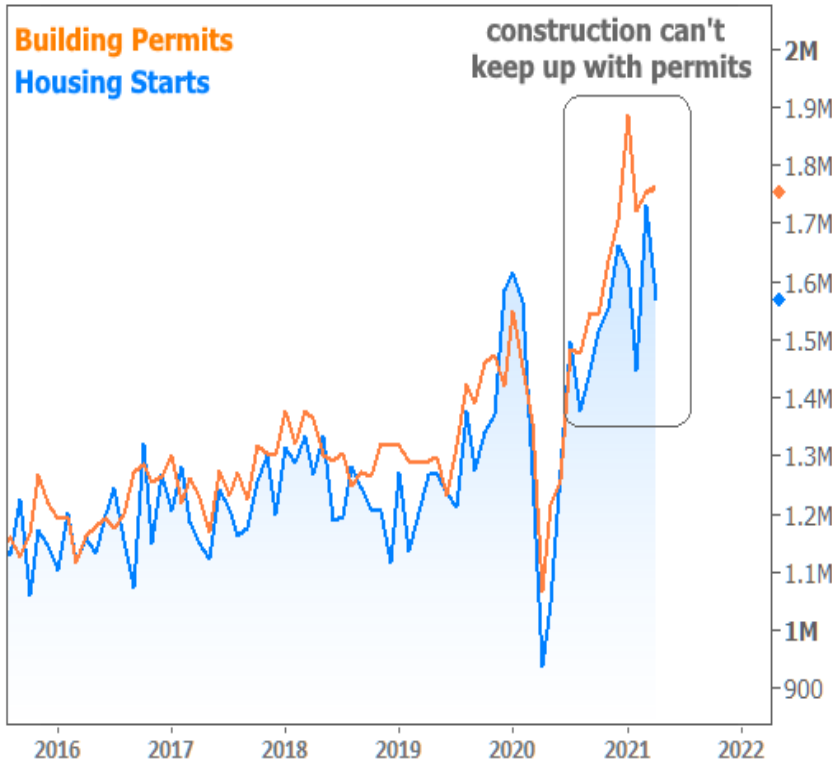

In this week's economic data, Existing Homes Sales moved lower yet again.

How is it that sales keep declining when we're hearing so much about a veritable buying frenzy in many local real estate markets? The explanation has been and continues to be one of **inventory!** The following chart shows the monthly change in existing home inventory. It's a very seasonal thing, and it always peaks with April's numbers (reported near the end of May). Each red bar is April. With this week's report, the past 2 Aprils now stand as the lowest gainers for housing inventory in decades.

But that's for **existing** homes. How about **new** homes? Well... builders are building as fast as they can. Supply chain disruptions, land availability, labor force issues, and price pressures are causing delays. Construction simply can't keep up with building permits.

## Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

**Mike Baker**
