Rates Bounce After 3 Weeks of Improvement; Prices Still Defying Gravity

By last Friday, rates had improved so much from recent highs that we were finally able to consider that 2022's trend had shifted gears from "skyrocketing" to "sideways." While that possibility can still be entertained, this week's rates are definitely higher.

Here's how things look when we zoom in to just the past 6 weeks:

Context is important. While these would be big swings during normal times, they are par for the course during 2022's heightened volatility.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00
Freddie Mac			
30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

Rates as of: 6/28

Market Data

	Price / Yield	Change
MBS UMBS 5.5	98.49	-0.45
MBS GNMA 5.5	99.10	-0.44
10 YR Treasury	4.3980	+0.1111
30 YR Treasury	4.5640	+0.1383

Pricing as of: 6/28 5:59PM EST

Recent Housing Data

	Value	Change
Mortgage Apps	Jun 12 208.5	+15.58%
Building Permits	Mar 1.46M	-3.95%
Housing Starts	Mar 1.32M	-13.15%
New Home Sales	Mar 693K	+4.68%
Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

In hoping for a shift to a sideways trend, we're simply hoping to avoid breaking back above the peak seen at the beginning of May. Such an achievement will likely have a lot to do with economic data.

2022's most closely-watched economic reports are those that pertain directly to **inflation**. In fact, for most of the year, the biggest reactions in rates have followed inflation reports and the policy response from the Fed.

In the absence of any big ticket inflation reports this week, markets were forced to look elsewhere for inspiration. They found it over the weekend in overseas market developments. These included the lifting of covid lockdowns in China and record-setting inflation in the Eurozone.

The holiday closure of U.S. bond markets on Monday made for an abrupt start to the week on Tuesday. The following day, bonds were spooked once again by a key report from the Institute for Supply Management (ISM) that showed stronger than expected growth in the manufacturing sector.

10yr Treasury Yields don't directly dictate mortgage rates, but they tend to move in the same direction in similar proportion over time. They also give us a way to view more granular movement in the bond market. This is useful because bonds are the primary ingredient used by lenders to determine mortgage rates. Granted, there are bonds that directly pertain to the mortgage market (MBS), but they require a bit more explanation because they trade in PRICE (which moves inversely to rates). Either way, the **takeaway is the same** for this week's rate volatility.

It's **interesting** to consider just how prominent the bond market's reaction was to the ISM data. Although ISM has one of the strongest track records among other economic reports when it comes to inspiring rate movement, the impact has been lighter than normal over the past few years. Most recently, this could be chalked up to the market's hyperfocus on inflation.

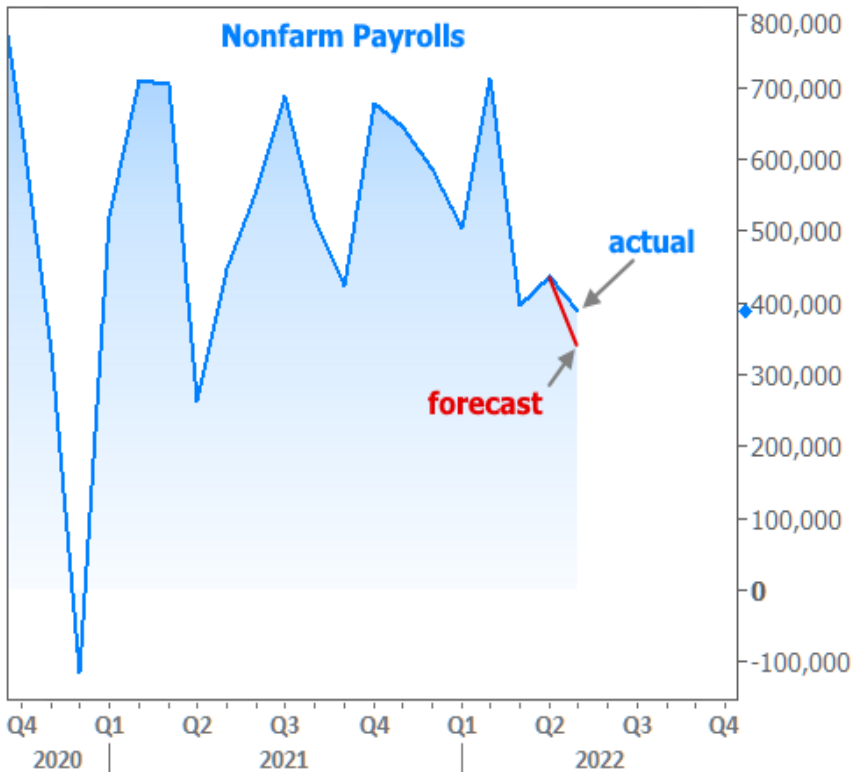

But now that inflation is attempting to turn a corner, and on a week **without** any major inflation data, markets were free to consider the implications of other economic data. The interesting part is how big the reaction was **RELATIVE** to where the ISM numbers came in. The following chart shows the consensus among economic forecasters and the actual result.

In other words, it doesn't seem like such a small divergence from expectations should have mattered. To a slightly lesser extent, the same was true for Friday's big jobs report, which also resulted in bond yields moving higher.

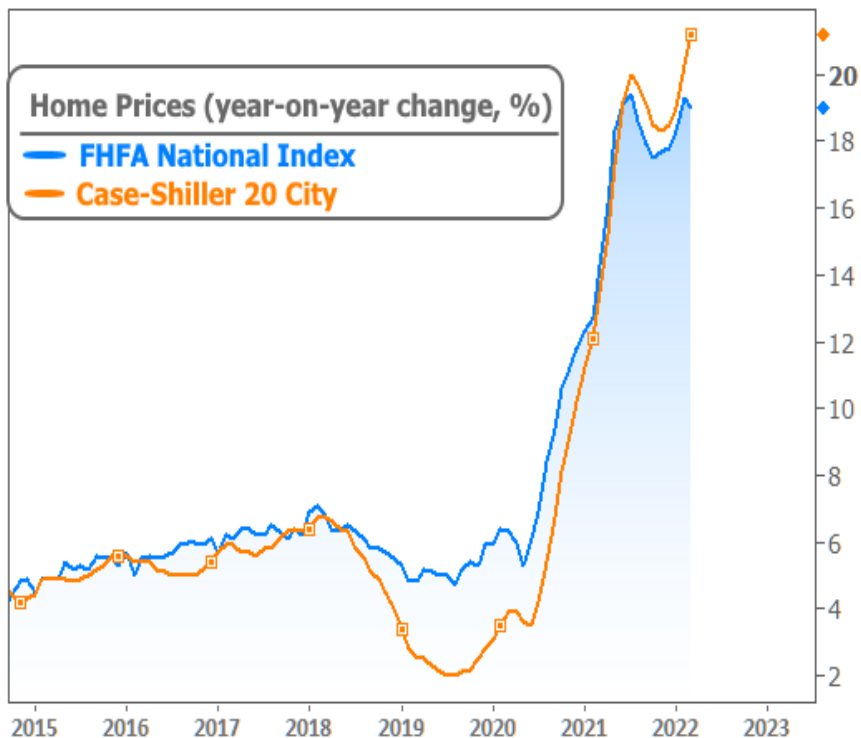

And here's how the job count fared versus the forecast:

What this tells us is that there's a bit of a mismatch between economists and traders with the market having apparently bought in to a gloomier outlook. While the gloom may yet prove to be justified, the disagreement in the data is giving pause to recent rate-friendly trends.

There was a smattering of other economic reports this week and while none of them moved the needle like those referenced above, at least one of them was quite interesting. Specifically, home prices continued to rise at a pace that suggests very little concern for rates. In fact, when it comes to Case-Shiller's 20-metro-area index, price appreciation set a new year-over-year record.

Does this actually mean **prices don't care about rates**? That's a complicated question. Certainly, rising rates combined with staggering price increases mean that affordability has suffered. In turn, the affordability situation will increasingly dampen homebuying demand. In the coming months, we'll likely see the effects in the home price data.

So why haven't we seen it yet? That's also not the most easily answered question, but there's **at least one simple consideration**: the home price data only covers transactions that closed in March. The prices associated with those transactions were decided at least another month prior. In other words, there's some lag (and yes, there are other complicating factors as well including but not limited to supply/demand imbalances in many areas).

Bottom line, don't be surprised when the lines in the chart above begin to fall. They will. And that's actually a good thing (because this pace of appreciation is unsustainable). What we can't currently know is what the reversal in appreciation will look like and whether it will give way to actual declines in value.

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

Mike Baker
