## Doom, Gloom, Kool Aid, And Warm Porridge

Mortgage rates finally broke the 8% ceiling this week after months of gradual upward movement in the 7% range. At the same time, Existing Home Sales fell to the lowest levels in more than a decade. Pretty gloomy... but there are silver linings and perhaps even some overly optimistic Kool Aid to drink. As always, we'll try to focus on the warm bowl of porridge in the middle.

It's very true. The following charts of home sales and interest rates are not great.

**Existing Home Sales**

TRADINGECONOMICS.COM | NATIONAL ASSOCIATION OF REALTORS

## National Average Mortgage Rates

	Rate	Change	Points
--	------	--------	--------

### Mortgage News Daily

30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00

MBS UMBS 5.5	98.49	-0.45
MBS GNMA 5.5	99.10	-0.44
10 YR Treasury	4.3980	+0.1111
30 YR Treasury	4.5640	+0.1383

Pricing as of: 6/28 5:59PM EST

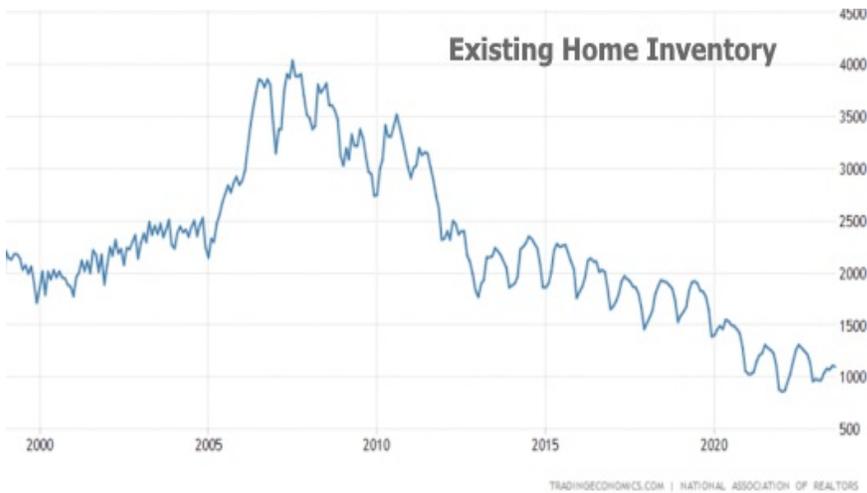

## Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

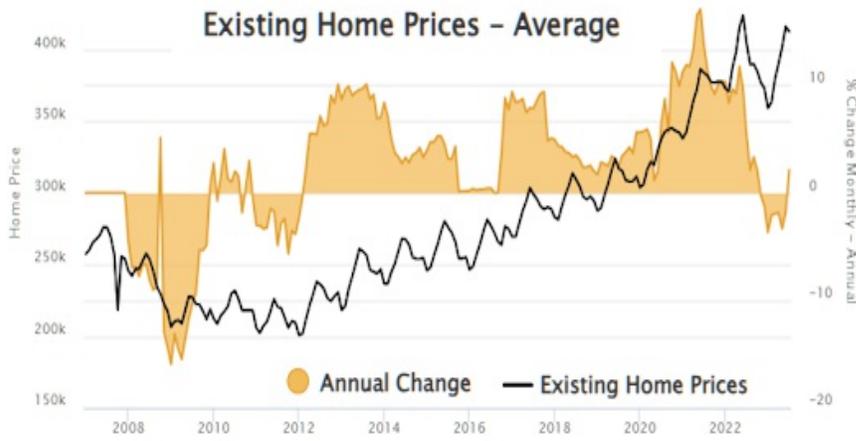

### 30yr Fixed Mortgage Rate Indices

But unlike the last time home sales were this low, we're in the midst of a supply shortage as opposed to a glut.

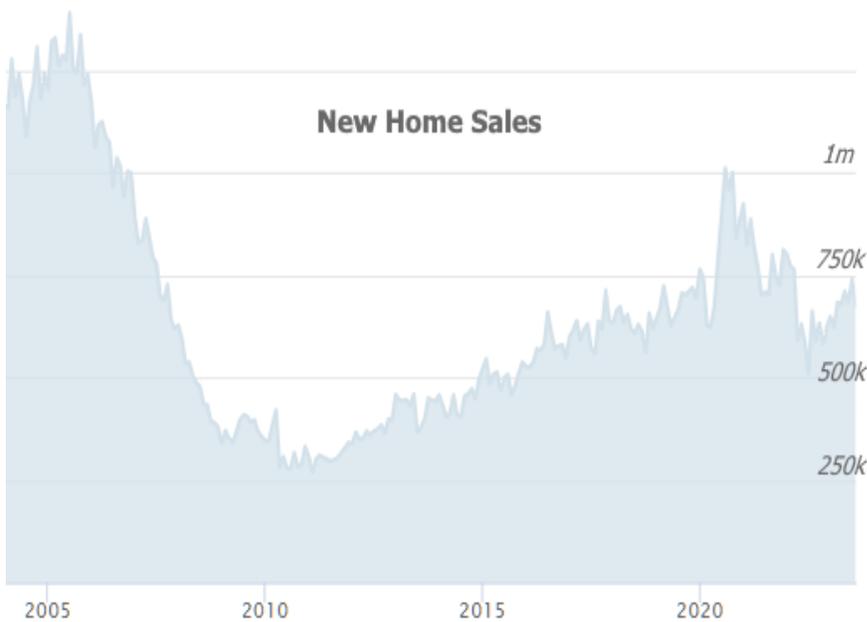

That has allowed the housing market to be much more resilient in terms of home prices. In year-over-year terms, prices are already back in positive territory.

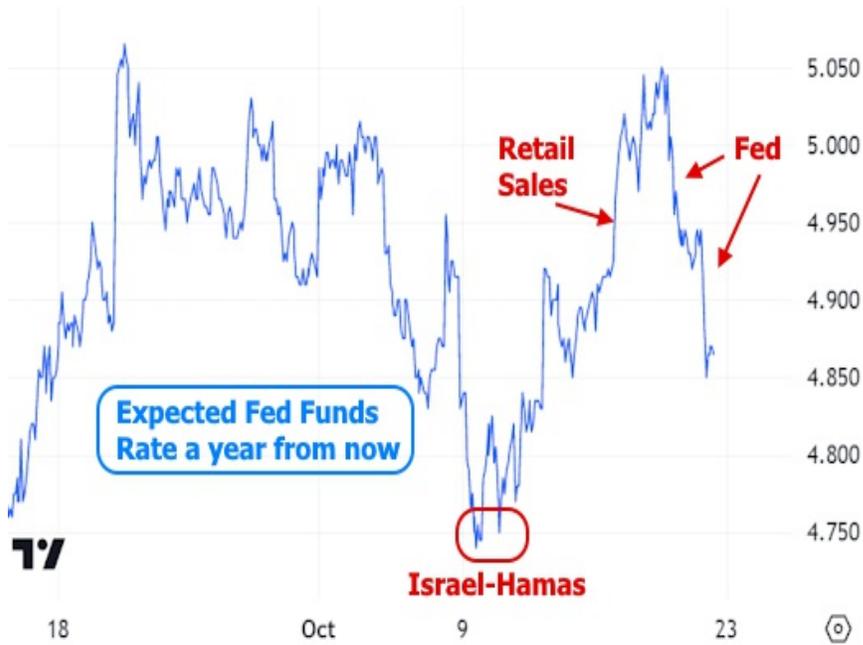

We can also consider that the charts above pertain to EXISTING home sales, where the inventory depends on homeowners wanting or needing to sell. With many of those homeowners still paying the 2-3% mortgage rates obtained 2020-21, the reluctance to give that up in favor of a 7-8% rate is no surprise.

That's why the charts look much better when they focus on new home sales, which are nowhere near their 2010 levels. In fact, they've been trending higher and are currently in line with pre-pandemic levels.

For those who want to take silver linings into potential "Kool Aid" territory, we could start to look at things like the balance of recent Fed comments which suggest the Fed is done hiking rates unless inflation flares up in an unexpected way. Just this week, that sentiment helped turn the tide after this week's strong Retail Sales sent Fed rate expectations quickly higher on Tuesday. By the end of the week, the market saw next year's Fed Funds Rate about a quarter of a point lower.

That has some market participants declaring that the big shift in rates has arrived.

Ceiling sentiment gained some momentum after several supportive bounces in 10yr Treasury yields on Thursday and Friday just under 5%. Many investors have been saying 5% is an important psychological level and an attractive entry point for bond buyers (buying pushes yields lower). If investors are putting their money where their mouths are, it would line up with these sorts of bounces.

The proverbial "warm bowl of porridge" is somewhere between the gloom and the hope. It usually is. It's also impossible to perfectly define in terms of scope and timing. There are scenarios that could indeed result in rates moving gradually lower from here. Or the big shift might not happen for months. Some say it is overdue already. Others say "wait for 2025!"

There are ways to make cases for both outcomes, but the actual outcome will be driven by economic data. The good news there is that the Fed expects a certain measure of resilience in the data. They won't freak out if unemployment remains under 4% or GDP rises above 4%. As long as inflation continues to moderate and the economy doesn't accelerate at an unsustainable level, they're pretty sure they're done hiking rates.

That doesn't mean the Fed is done with "restrictive" policies, just that the restriction will now come in the form of a ticking clock. In other words, the question is less about additional rate hikes and more about how long we spend at current rates. Markets tend to push consumer rates lower before the Fed officially cuts, but there again, the market would only do that if it saw data that was likely to lead the Fed to similar conclusions.

After an active slate of Fed speakers over the past 2 weeks, we now enter the scheduled blackout period which precedes every Fed rate announcement. The next announcement is on November 1st. The Fed is not expected to hike, but markets will be attuned to any verbiage changes in the statement.

In the meantime, the upcoming week of data is not as critical as the following week will be. We're especially focused on the jobs report due out on Friday, November 3rd. If it reiterates the uncanny strength of the previous report, Team Gloom will score some points. But if it paints a much more moderate picture, the Kool Aid will be looking safer and safer to drink.

## Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.

**Mike Baker**
