For Markets, Political Spotlight Shifts From US to Europe

In [last week's newsletter](#), we discussed a series of wild cards hitting the table and their impact on financial markets. Specifically, the potential reversal of post-election optimism helped interest rates break below 2017's narrow range. But that was just one small example of **much bigger uncertainty**. Sooner or later, markets will have to decide what's most important and trade accordingly.

Domestic Fiscal Policy Wild Cards

One of the key takeaways from the presidential election was that a Trump administration was more likely to create growth and inflation than a Clinton administration. That's not necessarily how financial media portrayed the market reaction **BEFORE** the election, but that's certainly how traders responded **AFTER** the election.

In other words, rates and stock prices moved higher. There's no telling whether it was **actual** optimism for growth and inflation (both bad for rates) or a simply investor excitement over potential **tax reform** (great for stocks) that did the trick, but clearly, markets are tuned in to the fate of proposed fiscal reforms.

For now, traders are waiting to see if policies can get off the ground. To that end, rates had second thoughts about continuing deeper into 2017's lows due to the Trump administration's comments on tax reform. In separate headlines, Secretary Mnuchin said Treasury was hard at work on tax reform and Trump himself said a plan that was **bigger than "any tax cut ever"** would be unveiled next week.

Geopolitical Wild Cards

Despite its lingering importance, fiscal drama has taken a back seat geopolitical concerns. Last week, this was all about Syria and North Korea. This week, focus shifted toward Europe.

European markets were closed on Monday. When trading fired up on Tuesday, there was a quick reaction to headlines suggesting British Prime Minister Theresa May wanted to call an **early general election** (with the goal of retrenching support for Brexit-related policies). As far as markets are concerned, Brexit generally equates to lower stocks and rates. British stocks fell the most, but that weakness spilled over into global stock markets and

National Average Mortgage Rates

	Rate	Change	Points
--	------	--------	--------

Mortgage News Daily

30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00

MBS GNMA 6.0	100.23	-0.10
10 YR Treasury	4.4385	+0.0405
30 YR Treasury	4.5957	+0.0317

Pricing as of: 7/1 8:54AM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Jun 12	208.5	+15.58%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

US Housing Market Weekly

ultimately provided some benefit for interest rates.

British election surprises quickly gave way to **French** election expectations. It's no mystery that France will elect a new president this weekend, and that one of the candidates is the controversial Marine Le Pen. Much like Brexit, markets view Le Pen as "bad for business." In the second half of the week, Le Pen fell in polls, prompting a surge in French stocks and European bond yields. Here too, the move spilled over to US bond markets, pushing rates slightly higher.

European vs US Markets

Markets are mostly in position for Le Pen to **lose** on Sunday. Even so, the **confirmation** of that fact would be worth a bit of extra pain for interest rates. If she wins, the response would be much bigger (and likely positive for rates), but we'll cross those bridges in next week's newsletter.

Econ Data and Fed Wild Cards

The state of the economy and the Fed's subsequent policy response to economic conditions remains an ongoing wild card. Does the Fed **really believe** growth and inflation might necessitate tighter monetary policy or are they simply tightening now so they can loosen policy when the economy begins to lose steam? Interestingly enough, Fed members have answered "yes" to **both** those questions recently.

This week didn't tell us much about new evolutions in the Fed's thought process. And we only saw limited instances of new economic data. But the data that came out was generally **positive** for the housing market.

The National Association of Realtors' [Existing Home Sales report](#) inched up to its **best levels since 2007**, continuing a trend that's easy to see in the top of the following chart. [Government data on new construction](#) was a mixed bag with Housing Starts falling a bit short while Building Permits advanced. Both remain in a solid upward trend. [Homebuilder Sentiment](#) was the only major housing report that declined (note: it covers April while the other two covered March). Despite the decline, the bigger-picture trend remains arguably positive, as seen at the bottom of the chart.

Real Talk

At The Rate Shop, we're not your average mortgage banker. We specialize in bringing you ridiculously low interest rates that will make you wonder what the other guys are doing. In fact the ONLY objection we ever hear is "your rates sound too good to be true". Well they're not, and here is why...

After 15 years in the retail banking world I was frustrated with the high interest rates that came from that business model. As I looked around at all the bloated layers of management and their expensive salaries and the overhead of running a larger company (think rent costs, employee health and benefit costs, payroll taxes, and on and on) it dawned on me that I was a part of the problem, and the solution, for me at least, was so easy to see.

Start my own mortgage brokerage shop. No expensive executive salaries, no expensive building to pay rent at, no unnecessary employees and all the costs that are associated with that. What happens when you cut out all the fat? You can provide lower rates and lower closing costs. It's simple. Now here is the best part, you still get great service from a local Kansas City Lender. My mission is to let everyone know that low rates and great customer service are NOT mutually exclusive.

Thanks for coming along on this journey where Low Rates meet Great Service. The two do NOT have to be mutually exclusive. It's just a lie that the big box mortgage companies have been telling you for years. Don't believe me? Give me a call or shoot me a text on my personal cell phone today and compare my rates and costs up against any other lender in the country, and be prepared to be blown away.
