## Have We Already Seen The Big Bounce?

Rates have enjoyed unprecedented stability near all-time lows following Brexit (UK's vote to leave the EU) in late June. Mortgage rates are still reasonably close to those lows, but other metrics suggest we **may have already seen** the big bounce.

Whenever we look at mortgage rates, the quintessential "other metric" is the US Treasury market--chiefly, 10yr yields. The term "yield" is interchangeable with "rates," and the **10yr is top dog** when it comes to observing trends in longer term domestic interest rates (like mortgages).

Treasuries tend to move **more quickly** than the bonds that underlie mortgage rates, especially when global markets are more volatile. If you missed it, I covered this in greater detail in [last week's newsletter](#).

Right now, mortgage rates aren't flashing too much of a warning sign about broader trends. But the same **can't** necessarily be said for Treasuries. One way we identify **warning signs** is by looking for "key levels" that have demonstrated some repetitive behavior in the past. This type of analysis works for anything you can put on a chart, by the way!

In the following chart, the key levels surround 1.53% in 10yr yields. You might also run into terms like "pivot" or "inflection point." In all cases, we're looking for places where rates have been more likely to **BOUNCE** as opposed to **BREAK**. The chart clearly shows that the immediate wake of the Brexit vote was the only break below 1.53 we've had in a long time.

## National Average Mortgage Rates

	Rate	Change	Points
<b>Mortgage News Daily</b>			
30 Yr. Fixed	6.89%	0.00	0.00
15 Yr. Fixed	6.33%	+0.01	0.00
30 Yr. FHA	6.33%	+0.01	0.00
30 Yr. Jumbo	7.05%	0.00	0.00
5/1 ARM	6.58%	0.00	0.00

### Freddie Mac

30 Yr. Fixed	6.77%	-0.09	0.00
15 Yr. Fixed	6.05%	-0.11	0.00

Rates as of: 7/22

## Market Data

	Price / Yield	Change
MBS UMBS 5.5	99.49	+0.10
MBS GNMA 5.5	99.91	+0.13
10 YR Treasury	4.2315	-0.0210
30 YR Treasury	4.4528	-0.0197

Pricing as of: 7/23 9:03AM EST

## Recent Housing Data

		Value	Change
Mortgage Apps	Jul 10	206.1	-0.19%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

10yr Treasury Yields

Of course, when it comes to financial markets, repetitions of past patterns won't always predict the future. However, repetition does build a case for a certain level being significant. **It's as simple as this:** if rates hardly ever break through a given level, it's easier to argue that it means something when they do.

The more repetition we see, the stronger the case for significance becomes. The fact that rates had **previously** attacked these levels all the way back in February and most recently have treated them as a "ceiling" on several occasions, means investors are increasingly eyeing 1.53%.

We can continue **building a case** for significance by observing coincident indicators. In the next chart, we see German 10yr yields (a proxy for "European rates"), British currency (indicator of Brexit-related volatility), and Japanese currency, all overlaid against US 10yr Treasury yields. All of these speak to the possibility that the worst of the post-Brexit panic has subsided.

Brexit Bounce?

Were this trend to continue, it would be a forceful argument in favor of mortgage rates having seen long-term lows in early July. As of right now, we **still haven't seen enough** of a move in global financial markets to confirm that big players are running back to the other side of the proverbial playing field--just enough to get the fans on their feet, in anticipation of that possibility.

What does all this mean for you? Not too much at this very moment, but it **COULD** soon mean that rates will keep heading higher in the short term. To be clear, there is **not** much belief out there in any dire scenarios for rates in the long-term. But even those calling for rates to hit new all-time lows in the future know there will be periodic corrections along the way. Recent market movements mean risks are elevated that we're on the brink of one of those corrections.

In **housing-specific news**, the Mortgage Bankers Association (MBA) was a prolific contributor. Their **first report** of the week noted that mortgage **credit availability tightened** in June, with all four of its MCAI component indices moving lower.

In a separate news release, the MBA noted the lingering effects of last week's low rates in the form of another **surge in refinance applications**. Purchase apps remain troublingly stagnant.

Finally, the MBA released information from its **builder survey**, resulting in an estimated **0.2 percent decrease** in new home sales.

Moving on to other data, **foreclosure inventory** is back to 1 percent, **according to CoreLogic**. The firm based this assessment on the fact that only 390k homes (which is 1% of total homes with mortgages) were in some stage of foreclosure in May.

## Update: Buyer Broker Agreement

After requests from real estate companies, a nonprofit consumer watchdog group the Consumer Federation of America has developed a list of factors to consider when creating a buyer contract in preparation for upcoming practice changes in the industry.

CFA released its "Proposed Criteria for Evaluating Home Buyer Contract Forms" on Tuesday. The 15 criteria focus on the contracts' form – whether the documents are readable and understandable – and content – whether they are fair to homebuyers.

- the document's expiration date (CFA recommends buyers asks for a three-month contract and never sign one longer than six months)
- the right to terminate the contract
- the disclosure that compensation is negotiable
- the broker's compensation clearly stated and that the buyer broker can't receive additional compensation for facilitating a sale
- that any additional fees, such as for showing a home, will be deducted from the broker's commission if there is a successful sale
- that the commission is due only if there is a successful closing
- that buyers have an obligation – for no longer than 60 days, CFA recommends – to pay a broker who earlier showed them a home they purchased after the contract ended
- seller concessions paid directly to buyers
- dual agency not pre-approved by the contract
- an explanation of how a broker treats different buyer clients interested in the same property
- that buyers should not be required to first go through mediation or arbitration if they have a complaint
