## Does Housing Market Care About Impeachment?

It's effectively impossible to read, watch, or listen to the news this week without the impeachment taking center stage. While this sort of thing may be interesting to network news producers, it's of **almost no consequence** to financial markets--let alone the housing and mortgage market.

Granted, it would be a different story if there was a reasonable chance of Trump being removed from office. But that would require a 2/3rds vote in the Senate--something that borders on **impossible** not only for Trump, but for any president in the modern political environment.

Because of that, markets couldn't care much less about the impeachment proceedings when it comes to informing the direction of their next move. **At the very least**, I can tell you they're not trading any differently based on the risk Trump is removed from office.

There is a bit of a paradoxical effect to consider, however. Some political strategists, pundits, and relatives visiting for the holidays have suggested that a failed attempt to remove the president from office only strengthens his chances of reelection in 2020. To whatever extent traders share that view, that **COULD** have an impact on the way they're trading. Sorting out the nuances of that impact is a complicated matter, but one might generally expect Treasury issuance to remain elevated and the tax code to remain relatively unchanged. Neither of those things have been great for rates in and of themselves.

### But if the tax code and Treasury issuance put upward pressure on rates, why did rates fall for most of 2019?

Great question! First off, much of the impact was felt in 2018 with rates hitting the highest levels since 2011 by the end of the year. 2019 ended up seeing pervasively lower rates for several reasons. One of the biggest reasons was the uncertainty surrounding the US/China trade war. If last week's phase 1 trade deal announcement is an indication of things to come, rates could face additional upward pressure in 2020. To be sure, that risk is weighing heavily on the minds of market participants as they ponder a big picture bounce similar to those seen in 2013 and 2016.

## National Average Mortgage Rates

	Rate	Change	Points
--	------	--------	--------

### Mortgage News Daily

30 Yr. Fixed	6.89%	0.00	0.00
15 Yr. Fixed	6.33%	+0.01	0.00
30 Yr. FHA	6.33%	+0.01	0.00
30 Yr. Jumbo	7.05%	0.00	0.00
5/1 ARM	6.58%	0.00	0.00

### Freddie Mac

30 Yr. Fixed	6.77%	-0.09	0.00
15 Yr. Fixed	6.05%	-0.11	0.00

Rates as of: 7/22

## Market Data

	Price / Yield	Change
MBS UMBS 5.5	99.39	-0.01
MBS GNMA 5.5	99.78	+0.00
10 YR Treasury	4.2423	-0.0102
30 YR Treasury	4.4608	-0.0117

Pricing as of: 7/22 10:58PM EST

## Recent Housing Data

		Value	Change
Mortgage Apps	Jul 10	206.1	-0.19%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

Softening that blow, to some extent, is the fact that deescalation of trade tensions would also help the stock market continue pushing all-time highs.

Homebuilders also have an eye on the trade situation as tariffs can have a small but noticeable impact on certain building materials. The improvement in trade relations with China is **only part of the story** though. In fact, it's probably the smaller part compared to the recently announced USMCA agreement. Homebuilders have generally praised several improvements over NAFTA, but the biggest benefit is that a part of the code that allows for the import of cheap Canadian lumber remains unchanged. Like anything, there are tradeoffs. The US lumber industry is not a fan, but homebuilders are the happiest they've been in more than 20 years.

In fairness, the promise of relatively cheaper materials isn't solely responsible for this phenomenon. Low interest rates have helped as has the fact that **NEW** homes are better able to adapt to shifts in affordability trends. That's a fancy way of saying that builders are able to build **smaller homes on smaller lots** whereas the average "**existing home**" has a wider footprint on a bigger piece of land. This comparative advantage helps explain why construction numbers continue to improve while Existing Home Sales have leveled off.

But there's an **even simpler, even better** way to reconcile the variation in trajectory between construction and existing sales. Simply put, construction lost a lot more ground during the mortgage meltdown, so it has more room to run before catching up to the rebound in existing sales.

In other news this week, mortgage rates pushed back up to their highest levels in more than a month, although that's **not quite as troubling as it sounds** given the exceptionally narrow range over that time. For reference, that range has been about an eighth of a percentage point (0.125%) between the lows and highs going all the way back to mid-October.

Market movement between now and the 2nd week of January will be unpredictable and perhaps illogical as market participation falls off dramatically for the holidays. Even if we do see movement in stocks and bonds, there's no guarantee it will have any bearing on the beginning of 2020. For that, we'll need to see how economic data is shaping up in the new year and how the US/China trade negotiations progress.

## Update: Buyer Broker Agreement

After requests from real estate companies, a nonprofit consumer watchdog group the Consumer Federation of America has developed a list of factors to consider when creating a buyer contract in preparation for upcoming practice changes in the industry.

CFA released its "Proposed Criteria for Evaluating Home Buyer Contract Forms" on Tuesday. The 15 criteria focus on the contracts' form – whether the documents are readable and understandable – and content – whether they are fair to homebuyers.

- the document's expiration date (CFA recommends buyers asks for a three-month contract and never sign one longer than six months)
- the right to terminate the contract
- the disclosure that compensation is negotiable
- the broker's compensation clearly stated and that the buyer broker can't receive additional compensation for facilitating a sale
- that any additional fees, such as for showing a home, will be deducted from the broker's commission if there is a successful sale
- that the commission is due only if there is a successful closing
- that buyers have an obligation – for no longer than 60 days, CFA recommends – to pay a broker who earlier showed them a home they purchased after the contract ended
- seller concessions paid directly to buyers
- dual agency not pre-approved by the contract
- an explanation of how a broker treats different buyer clients interested in the same property
- that buyers should not be required to first go through mediation or arbitration if they have a complaint
