Brutal Week For Rates But There's Hope (Hopefully)

Rising rates have been on the menu for months, but the drama kicked into a higher gear this week.

Maybe you heard about this? We've certainly been discussing it in recent newsletters ([especially last week's](#)). The rising rate narrative hit the mainstream this week as it was widely credited for doing damage to the stock market.

Perhaps you even caught one of Thursday's many mortgage rate headlines citing the spike in Freddie Mac's weekly mortgage rate survey. Freddie reported a jump in 30yr fixed rates from 2.81 to 2.97, their **biggest** in nearly a year.

Unfortunately, Freddie was **low** last week and they're **WAY low** this week. This is a common problem when things are this volatile. Although their survey is published on Thursdays, most of the responses are in by Monday. As such, their numbers didn't capture the **brutal** spikes that came later in the

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	6.89%	0.00	0.00
15 Yr. Fixed	6.33%	+0.01	0.00
30 Yr. FHA	6.33%	+0.01	0.00
30 Yr. Jumbo	7.05%	0.00	0.00
5/1 ARM	6.58%	0.00	0.00
Freddie Mac			
30 Yr. Fixed	6.77%	-0.09	0.00
15 Yr. Fixed	6.05%	-0.11	0.00

Rates as of: 7/22

Market Data

	Price / Yield	Change
MBS UMBS 5.5	99.39	-0.01
MBS GNMA 5.5	99.78	+0.00
10 YR Treasury	4.2204	-0.0175
30 YR Treasury	4.4259	-0.0209

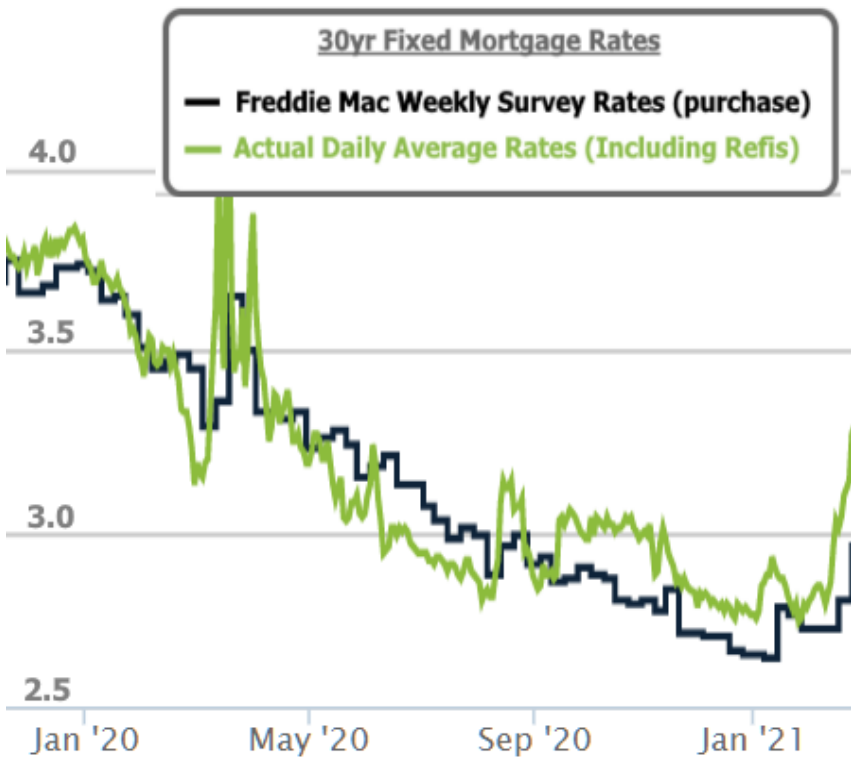

Pricing as of: 7/22 5:59PM EST

Recent Housing Data

	Value	Change
Mortgage Apps	Jul 10 206.1	-0.19%
Building Permits	Mar 1.46M	-3.95%
Housing Starts	Mar 1.32M	-13.15%
New Home Sales	Mar 693K	+4.68%
Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

week.

How brutal can a spike really be if we're still talking about rates in the low 3's? That's entirely a matter of perspective. If you'd decided to float your rate back at 2.75%, figuring that rates only ever go lower, February hasn't been great for you.

So why is all this happening? And more importantly, is it going to **KEEP** happening?

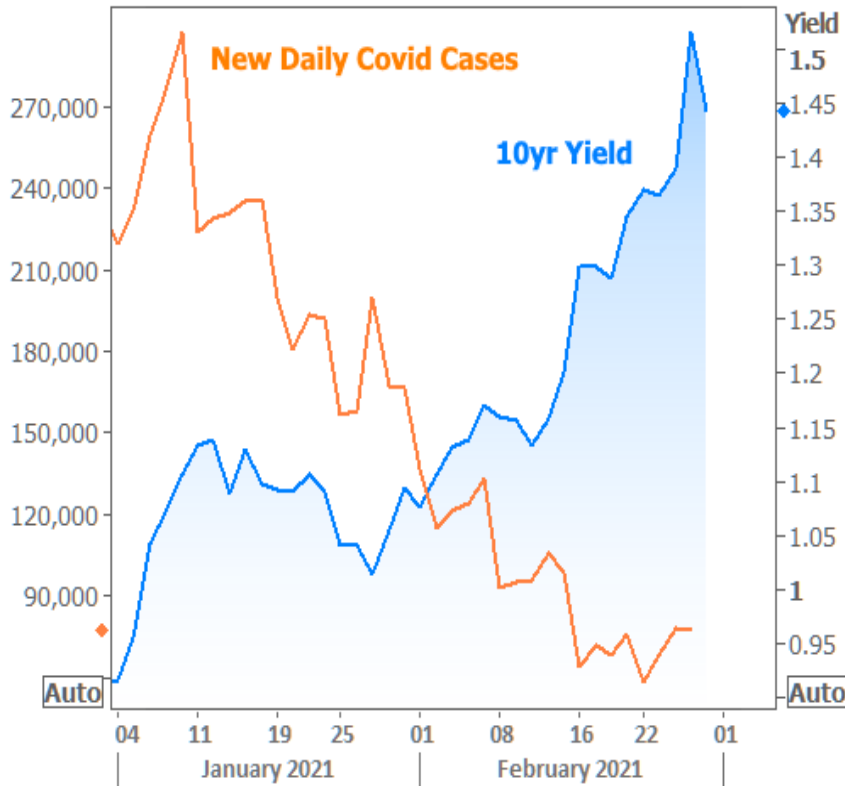

First off, **two separate things** are happening. On the one hand, we have the well-known, well-understood, and well-explained rising rate trend that's been intact for months. If you're a regular reader of the newsletter, you might be tired of that one by now. You can revisit one of any number of past newsletters for a refresher ([here's a good one](#) from late January).

In a nutshell, if covid caused a rapid surge to persistent all-time low rates, the improving outlook had the opposite effect--albeit a gradual one at first.

The other thing that's happening is a recent acceleration in the longstanding trend--first in 2021, but then to an even greater degree over the past 2 weeks.

Plummeting case counts played a big, logical role here as well as the Georgia senate election and progress on fiscal stimulus. Stimulus hurts rates by increasing the supply of Treasuries, and higher supply means higher rates, all other things being equal.

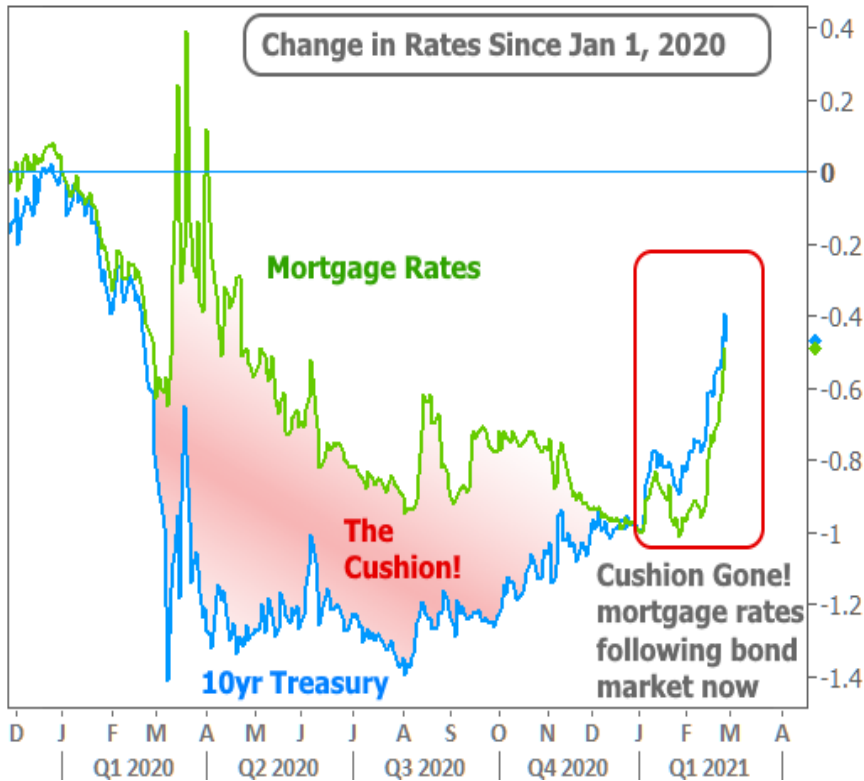

There was a fresh reminder about Treasury market supply at center stage for this week's rout. The 7yr Treasury auction on Thursday was the worst of its kind since its debut in 2009 (a bad auction speaks to an **absence of demand**, which has a similar effect on rates as an abundance of supply). Bonds hit their weakest levels of the week/month/year immediately after that, but thankfully appear to have stabilized since then.

The Treasury auction definitely wasn't the **only** consideration this week. After all, the volatility had already kicked into higher gear last week. There aren't any satisfying specifics though. It's a combo deal that all speaks to the improved outlook for covid and the post-covid economy.

There are also some highly technical trading motivations for bond investors that have to do with the changes in the rate landscape. These can force money managers to make big adjustments to their holdings, and those adjustments often play out in these sorts of "snowball selling" episodes when traders have the same collective realizations.

As for the mortgage market specifically, everything is happening **exactly as we said it would more than 2 months ago**. Mortgage rates have increasingly been **forced** to pay attention to broader bond market volatility. This week was the best (worst) example yet. The cushion is deflated, and the mortgage market is no longer invincible.

Reasons aside, the **big question** is whether the drama continues, or the bounce back is just the beginning of a deeper recovery. While there's never any way to know for sure, what we CAN know is that our odds (of a recovery) **improve** as rates move **higher**. In that sense, the brutality of the past 2 weeks is one of the best indications of potential support. While that doesn't necessarily make a friendly bounce **likely**, it's **more likely** than it was after last week's big rate spike.

Optimism aside, keep in mind that this is a **rising rate environment** in general, and we don't currently have a reason to believe that trend is at risk of dying. What we'd be hoping for here is a return to a more stable uptrend in rates. That "return" could help rates move a bit lower in the short term before resuming their gradual uptrend. Ultimately, it will be up to the course of the pandemic, the economy, fiscal spending, Fed policy, inflation, and other macroeconomic factors to determine the rate range through the end of the year.

Next week brings important updates as far as economic data is concerned. There will be several reasonably important reports throughout the week culminating in Friday's all-important jobs report.

Update: Buyer Broker Agreement

After requests from real estate companies, a nonprofit consumer watchdog group the Consumer Federation of America has developed a list of factors to consider when creating a buyer contract in preparation for upcoming practice changes in the industry.

CFA released its "Proposed Criteria for Evaluating Home Buyer Contract Forms" on Tuesday. The 15 criteria focus on the contracts' form – whether the documents are readable and understandable – and content – whether they are fair to homebuyers.

- the document's expiration date (CFA recommends buyers asks for a three-month contract and never sign one longer than six months)
- the right to terminate the contract
- the disclosure that compensation is negotiable
- the broker's compensation clearly stated and that the buyer broker can't receive additional compensation for facilitating a sale
- that any additional fees, such as for showing a home, will be deducted from the broker's commission if there is a successful sale
- that the commission is due only if there is a successful closing
- that buyers have an obligation – for no longer than 60 days, CFA recommends – to pay a broker who earlier showed them a home they purchased after the contract ended
- seller concessions paid directly to buyers
- dual agency not pre-approved by the contract
- an explanation of how a broker treats different buyer clients interested in the same property
- that buyers should not be required to first go through mediation or arbitration if they have a complaint
