The Fed is No Longer Eager to Cut Rates And The Market Knows It

It was largely a dull week for financial markets in terms of scheduled data and volatility, but numerous Fed speeches helped reiterate what the market thought it already knew. Specifically, whereas there was widespread belief in several rate cuts in 2024, the market now only expects 1.

The following chart shows the market's expectations for the Fed Funds rate at the end of the year. This is a futures contract that has been traded for months. In other words, when the line was lower in March and early April, it meant the market was expecting a lower Fed Funds Rate in December. Point being: the orange line in this chart always refers to the December meeting. The current Fed Funds Rate is 5.375, so anything in the 5.125 neighborhood implies a single 0.25% rate cut.

On a more timely note, a rate cut at the July Fed meeting is now seen as a near impossibility whereas it was almost a certainty in early April. The big spike in April followed the Consumer Price Index (CPI).

National Average Mortgage Rates

	Rate	Change	Points
--	------	--------	--------

Mortgage News Daily

30 Yr. Fixed	7.07%	+0.02	0.00
15 Yr. Fixed	6.45%	0.00	0.00
30 Yr. FHA	6.51%	+0.02	0.00
30 Yr. Jumbo	7.26%	0.00	0.00
5/1 ARM	7.02%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.86%	-0.01	0.00
15 Yr. Fixed	6.16%	+0.03	0.00

MBS GNMA 5.5	99.10	-0.44
10 YR Treasury	4.3980	+0.1111
30 YR Treasury	4.5640	+0.1383

Pricing as of: 6/28 5:59PM EST

Recent Housing Data

	Value	Change
Mortgage Apps	Jun 12 208.5	+15.58%
Building Permits	Mar 1.46M	-3.95%
Housing Starts	Mar 1.32M	-13.15%
New Home Sales	Mar 693K	+4.68%
Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

While this week's data and events didn't do anything to accelerate the negative rate cut sentiment, it definitely didn't push back in the other direction. Multiple Fed officials gave speeches that reiterated a logical reaction to hotter inflation data in the first quarter. Here are a few highlights in mostly chronological order:

- JEFFERSON: THE LARGE INCREASE IN MARKET RENTS DURING PANDEMIC MAY KEEP HOUSING SERVICES INFLATION ELEVATED FOR A WHILE
- BARR: THE FED WILL NEED TO ALLOW TIGHT POLICY TO HAVE FURTHER TIME TO CONTINUE TO DO ITS WORK
- BARR: Q1 INFLATION WAS DISAPPOINTING, IT DID NOT PROVIDE THE CONFIDENCE NEEDED TO EASE MONETARY POLICY
- BOSTIC: ON INFLATION: WE'VE STILL GOT A WAYS TO GO
- DALY: I AM NOT YET CONFIDENT INFLATION COMING DOWN SUSTAINABLY TO 2%
- MESTER: INFLATION PROGRESS STALLED IN THE FIRST THREE MONTHS
- MESTER: THE APRIL CPI REPORT WAS GOOD NEWS, BUT IT IS TOO SOON TO TELL WHAT PATH INFLATION IS ON
- MESTER: WE CAN HOLD RATES, OR EVEN RAISE THEM, IF INFLATION, AGAINST EXPECTATIONS, STALLS OUT OR REVERSES
- MESTER: PREVIOUSLY, I EXPECTED THREE RATE CUTS THIS YEAR. I DO NOT THINK THAT'S STILL APPROPRIATE
- BOSTIC: I WOULD RATHER WAIT LONGER FOR A RATE CUT TO BE SURE INFLATION DOES NOT START TO BOUNCE AROUND
- WALLER: I NEED TO SEE SEVERAL MORE MONTHS OF GOOD INFLATION DATA BEFORE BEING COMFORTABLE TO SUPPORT AN EASING IN POLICY

This is just a small sampling of the available comments. Several of these officials reiterated the same talking points later in the week, as did the minutes from the most recent Fed meeting that were released on Wednesday. From a rate watching standpoint, Waller's comment is likely the most important. "Several" more months means the Fed wouldn't be in a position to consider cutting until September at the earliest.

To restate the eternal mantra of the past 2 years and the foreseeable future, the Fed is entirely "data dependent." While this week was a non-event in that regard relative to the first two weeks in June, there were still a few considerations.

The week's most noticeable reaction followed S&P Global's service sector index which unexpectedly spiked to the highest level in a year. The report also mentioned the highest cost pressures in more than a year.

10yr Treasury yields (the leading benchmark for longer term interest rates in the US) jumped from 4.43 to almost 4.50 on the news.

That 4.50 level is important because that's the top of what we would consider to be the "boring" range for this holiday-shortened week (markets closed early on Friday and will be fully closed for Memorial Day on Monday).

Here's a slightly longer-term view of the same chart to show the recent activity around the 4.34% level.

As always, it's important to remember that lines on charts do nothing to predict the future, but when they're broken, it can serve as a heads-up that something slightly more significant is happening with rate momentum.

The only other economic report that had a noticeable impact this week was the inflation expectation component of the Consumer Sentiment survey. This normally wouldn't have a big impact because it is simply the final version of the preliminary report that came out 2 weeks ago, but in this case, it moved more than normal AND in the opposite direction from the initial reading.

1yr Inflation Expectations via Consumer Sentiment Survey

Despite the ground-holding, the move up toward the ceiling in the rate range meant that mortgage rates are higher than last week. That's fairly logical when we look at 10yr yields and consider mortgage rates tend to move in the same direction at a similar pace, but it runs counter to multiple news reports citing Freddie Mac's weekly mortgage rate survey.

Regular readers are familiar with the issue: Freddie's weekly survey is an average of Thursday through Wednesday's mortgage rates, and it's reported the next day. As such, the mortgage rates that are published on Thursday morning could be much higher than the average of the 5 days in the survey--especially if there was a big drop at the end of the previous week and a big jump on Thursday. Fortunately, the actual daily rate average from mortgagenewsdaily.com shows the day to day contour. Unfortunately, the news is less pleasant.

As for the general gap between Freddie and MND, Freddie's survey doesn't include discount points which are now much more prevalent than in the past. There are a few other ways to account for potential differences, but even then, the outright rate itself is far less important than the movement over time. Rate quotes can vary for so many reasons, so it's best to track the change in rates for a static scenario.

In the week ahead, there is slightly more on tap in terms of scheduled events that could impact the bond market. The most important report is Friday's PCE price index--a measure of inflation comparable to the Consumer Price Index (CPI).

Demand for Homes Drops to (Near) Record Low as Inventory Rises.

“The market is at an interesting point with rising inventory and lower demand”: National Association of Realtors

Let's take a glance at the “pending home sales” data by the National Association of Realtors. It's a forward-looking indicator of “closed home sales” based on contract signings – on deals that haven't closed yet and could still fall apart. But today's release of pending sales was interesting for several reasons, including the NARs' expectation that the collapsed demand along with rising inventories is going to cause home prices to “stabilize” in the second half of the year. So here we go.

The index value of pending home sales in May dropped by 2.1% from April, and by 6.8% from a year ago, to 70.8 (seasonally adjusted annual rate), what headlines dubbed an “all-time low” or “record low” in the data going back to 2001, and that's close enough. In the NAR data we have access to via YCharts, today's reading was still a hair above the prior all-time low of April 2020 (index value of 70). But the idea is the same: demand has collapsed, even as inventories have risen.

The index value was set at 100 for contract signings in 2001. So today's value of 70.8 is down 29% from the index average in 2001. Compared to the Mays in more recent years:

May 2022: -28%
May 2021: -39%
May 2020: -30%
May 2019: -33%.
