Waiting Game is Over and Rates Are Moving

As of last week, rates were showing some signs of resilience, but they had to wait for the true test from this week's jobs report. Spoiler alert: they passed the test.

The jobs report (officially called "The Employment Situation") is the most important economic report on any given month. Nothing else has as much power to push interest rates higher or lower. This installment, specifically, was in an ideal position to add clarity to mixed messages seen in the last several reports. The timing is particularly important as the market frets over whether or not the Fed will cut rates on December 18th.

There are two main components of the jobs report: a count jobs added to the economy (officially "nonfarm payrolls" or NFP for short) and the unemployment rate. While there was nothing overtly troubling about the 227k job count in this week's data, it was heavily bolstered by the return of workers who were either on strike or impacted by the hurricanes.

On an even less complicated note, consider that the average job count for the first half of the year was 255k per month. The second half of the year is only 148k. While this isn't a terrible number, the trend suggests a cooling labor market.

Let's make things simpler still by considering the unemployment rate. It came in at 4.246% (rounded down to 4.2 for headlines), the second highest reading since pandemic lockdowns. Here's how it looks in a chart:

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30YR Fixed	7.35%	+0.02	0.00
15YR Fixed	7.00%	-0.01	0.00
30YR FHA	6.99%	+0.01	0.00
30YR Jumbo	7.60%	0.00	0.00
7/6 SOFR	6.86%	+0.01	0.00
30YR VA	7.00%	+0.01	0.00

Rates as of: 10/28

MBS and Treasury

	Price / Yield	Change
MBS UMBS 6.0	99.67	+0.08
10 YR Treasury	4.9917	-0.0248
30 YR Treasury	5.3184	-0.0269

Pricing as of: 10/28 11:17PM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Oct 14	188.6	-5.32%
Building Permits	Sep	1.4M	+0.43%
Housing Starts	Sep	1.22M	-4.24%
New Home Sales	Aug	684K	+12.69%
Pending Home Sales	Aug	71.2	0%
Existing Home Sales	Oct	3.99M	+0.25%
Builder Confidence	Oct	29	-9.38%

Unemployment Rate, Unrounded

It would be fair to point out that 4.2+ is still a historically low unemployment rate, but just as fair to point out that the unemployment rate tends to move with a sort of glacial momentum that rarely changes course abruptly.

unemployment rate

At the very least, here too, we have evidence that the labor market of 2024 is noticeably cooler than it was in 2023. This cooling is one of the reasons the Fed decided to begin cutting rates in September. As we discussed in the weeks leading up to that, the market is able to anticipate those decisions, thus pushing rates lower before the Fed actually pulls the trigger. The same thing is arguably happening this week.

Along with the jobs report, the market also considers potentially pivotal comments from various Fed speakers. This week's most notable comment came from Fed's Waller who said he's in favor of voting for a rate cut on December 18th (he spoke several days before the jobs report came out).

The expected Fed Funds Rate is actually not even the best way to observe the rate trends that impact mortgages. For that, we need longer-term benchmarks like the 10yr Treasury yield. Treasuries were more interested in the economic data.

In addition to the jobs report, Wednesday's ISM Services index was also rate-friendly (i.e. it came out weaker than expected).

Mortgage rates don't always track perfectly with Treasury yields, but they've also been moving lower--especially after the jobs report. The average lender is at the best levels in a little over a month and a half.

After next week, the market will have an even clearer sense of the Fed's next move. Reason being: the next installment of the Consumer Price Index (CPI) comes out on Wednesday. CPI is the most influential monthly data when it comes to inflation, and inflation is the Fed's main focus. After solid progress back down toward target levels, recent months have shown more of a sideways trend. Traders are eager to see if it continues or if it gets back on track. Either way, they will tell us what rates will do before the Fed meets the following week.

A Lower Price or a Lower Rate? Don't Guess. Compare: 10-22-2026

What Every Agent Should Know:---

With mortgage rates challenging affordability and buyers hesitant to make decisions, sellers are increasingly willing to negotiate. But here's a question every REALTOR® should consider:---

Is your buyer better off negotiating a lower purchase price—or asking the seller to contribute toward a permanently lower interest rate?---

A price reduction lowers the mortgage balance, but the resulting monthly payment savings may be surprisingly small.---

Alternatively, a seller contribution toward a permanent interest-rate buydown could provide substantially greater monthly payment relief, even with a higher purchase price.---

But what if mortgage rates decline in the next 6, 12, or 24 months?---

That's the question nobody can answer with certainty.---

A buyer who negotiates a larger price reduction may benefit from a lower loan balance and potentially refinance if rates decline. A buyer who secures a permanently lower rate benefits immediately, without depending on future market conditions.---

Both strategies have merit. The right answer depends on the numbers, the buyer's financial priorities, and how long they expect to keep the mortgage.---

For listing agents, this creates another negotiating opportunity. A seller contribution toward financing costs may be more attractive to a payment-conscious buyer than another reduction in asking price.---

Before your buyer requests a price reduction—or your seller agrees to one—give me a call.---

Let's compare the alternatives. Sometimes the smartest negotiation isn't about the price. It's about how the transaction is structured.---
