Interest Rates Had a Boring Week, And That's a Good Thing

Rates rocketed lower with stunning consistency starting in late February. They finally bounced last week, but rather than move back up to previous levels, they held in a relatively narrow, sideways range. That set the stage for a showdown this week.

OK, a "showdown" may be a bit dramatic, but it's not an overstatement to say that rates were ready to embark on a new journey higher or lower, depending on the outcome of this week's data and events.

As it happened, data and events ended up cancelling each other out, so to speak. So despite seeing some back and forth movement, average rates continued to operate in the same mostly sideways range.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30YR Fixed	7.35%	+0.02	0.00
15YR Fixed	7.00%	-0.01	0.00
30YR FHA	6.99%	+0.01	0.00
30YR Jumbo	7.60%	0.00	0.00
7/6 SOFR	6.86%	+0.01	0.00
30YR VA	7.00%	+0.01	0.00

Rates as of: 10/28

MBS and Treasury

	Price / Yield	Change
MBS UMBS 6.0	99.67	+0.08
10 YR Treasury	4.9917	-0.0248
30 YR Treasury	5.3184	-0.0269

Pricing as of: 10/28 11:17PM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Oct 14	188.6	-5.32%
Building Permits	Sep	1.4M	+0.43%
Housing Starts	Sep	1.22M	-4.24%
New Home Sales	Aug	684K	+12.69%
Pending Home Sales	Aug	71.2	0%
Existing Home Sales	Oct	3.99M	+0.25%
Builder Confidence	Oct	29	-9.38%

It may not be much of a surprise when looking at the chart above, but "sideways" is a good thing at the moment. In terms of time spend near the lowest levels, this is the best run we've had since October. With that in mind, it's also not a surprise to see refinance activity picking up to the best levels since October. The chart below shows this via the Mortgage Bankers Association's refinance application index.

If there was a reason to entertain the possibility of a more directional move this week, it would have been the release of two key inflation reports, CPI and PPI. Both had a noticeable impact last month and inflation is generally a top concern for rates these days. Both reports showed inflation running lower than expected--something that would normally be a great thing for rates.

But the reaction ended up being counterintuitive for a somewhat tricky reason. While CPI and PPI are indeed important inflation indicators, there's another inflation report that is an even bigger deal: PCE. PCE won't be out for 2 more weeks, but here's where things get tricky.

Both CPI and PPI measure a multitude of different spending categories in both goods and services. Some of those measurements are used to determine PCE inflation (the bigger report that isn't out yet). In this week's case, those PCE-specific categories were higher than expected even though the overall CPI/PPI numbers were lower.

Bottom line, rates care more about PCE and thus reacted to the parts of this week's data that influence PCE as opposed to this week's data itself.

Granted, this wasn't the consideration for rates this week--just the most interesting one. The scheduled auctions of Treasury securities may have kept rates from being eager to drop. And of course, there are plenty of fiscal headlines these days. In general, these have caused more drama for stocks, and stock losses had been helping rates move lower, but that trend ended last week.

As we head into the weekend, the Senate is voting on a bill to avert a government shutdown. The market reaction has generally been good for stocks and bad for rates. Once passage is confirmed, there could be additional follow-through, but it was largely assumed during the trading day on Friday.

Looking ahead, there are several calendar events that could cause volatility next week with important economic reports coming out almost every day. Wednesday afternoon's Fed announcement is already assumed to have zero chance of a rate cut, but markets will still be curious to see how the Fed's rate outlook has evolved since December (The Fed releases updated rate forecasts at only 4 out of the 8 meetings per year).

A Lower Price or a Lower Rate? Don't Guess. Compare: 10-22-2026

What Every Agent Should Know:---

With mortgage rates challenging affordability and buyers hesitant to make decisions, sellers are increasingly willing to negotiate. But here's a question every REALTOR® should consider:---

Is your buyer better off negotiating a lower purchase price—or asking the seller to contribute toward a permanently lower interest rate?---

A price reduction lowers the mortgage balance, but the resulting monthly payment savings may be surprisingly small.---

Alternatively, a seller contribution toward a permanent interest-rate buydown could provide substantially greater monthly payment relief, even with a higher purchase price.---

But what if mortgage rates decline in the next 6, 12, or 24 months?---

That's the question nobody can answer with certainty.---

A buyer who negotiates a larger price reduction may benefit from a lower loan balance and potentially refinance if rates decline. A buyer who secures a permanently lower rate benefits immediately, without depending on future market conditions.---

Both strategies have merit. The right answer depends on the numbers, the buyer's financial priorities, and how long they expect to keep the mortgage.---

For listing agents, this creates another negotiating opportunity. A seller contribution toward financing costs may be more attractive to a payment-conscious buyer than another reduction in asking price.---

Before your buyer requests a price reduction—or your seller agrees to one—give me a call.---

Let's compare the alternatives. Sometimes the smartest negotiation isn't about the price. It's about how the transaction is structured.---
