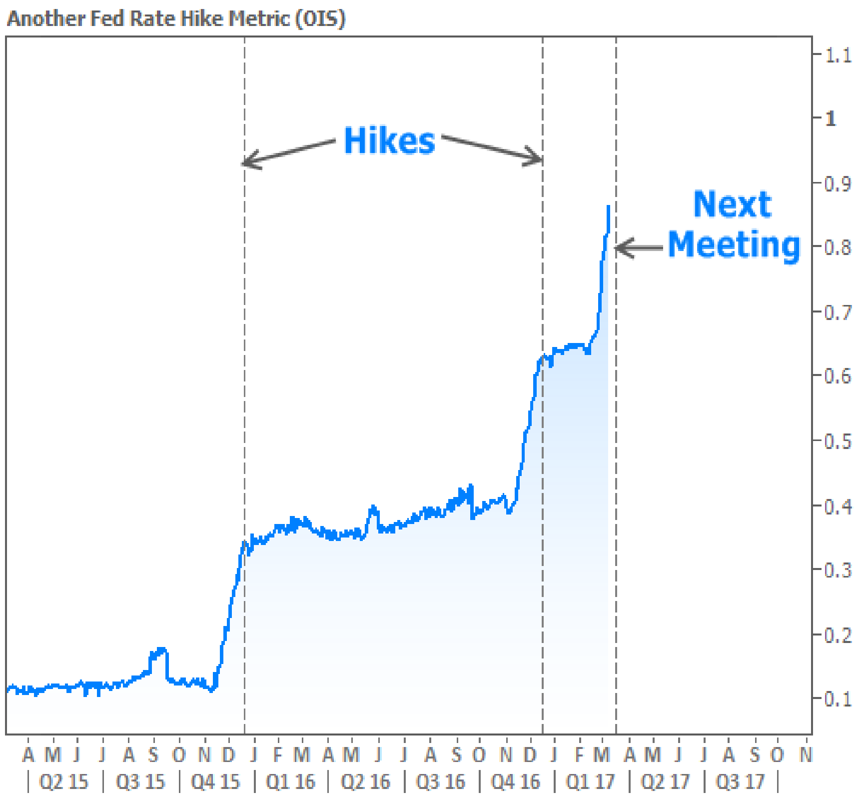
Fed Rate Hike Next Week is Pointless!

Next week's Fed announcement is a hot topic. Market metrics and surveys of economists suggest ever-increasing odds of a rate hike. As such, it may come as a surprise to learn that a rate hike is **pointless** in terms of its impact on financial markets, but there's a catch.

It's pointless because at **no time** in recent memory have financial markets been so certain that the Fed will make a particular move. There's actually no way a Fed rate hike could be any **more** likely than market metrics suggest.

Among those metrics, one of the most reliable is the "overnight-indexed swap" market (or "OIS"). Simply put, it reflects the rate banks are charging each other for short-term borrowing. Given that the Fed Funds Rate is the **final word** in short-term borrowing, OIS closely tracks the expected Fed Funds Rate in the month leading up to a potential rate hike. This is easy to see in the following chart.



The trajectory of the blue line over the past month means billions of dollars are **already actively prepared** for next week's hike... done deal... pointless to wonder anymore. It would take something truly astonishing (in a bad way)

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	6.89%	0.00	0.00
15 Yr. Fixed	6.33%	+0.01	0.00
30 Yr. FHA	6.33%	+0.01	0.00
30 Yr. Jumbo	7.05%	0.00	0.00
5/1 ARM	6.58%	0.00	0.00
Freddie Mac			
30 Yr. Fixed	6.77%	-0.09	0.00
15 Yr. Fixed	6.05%	-0.11	0.00

Rates as of: 7/22

Market Data

	Price / Yield	Change
MBS UMBS 5.5	99.50	+0.11
MBS GNMA 5.5	99.92	+0.15
10 YR Treasury	4.2306	-0.0219
30 YR Treasury	4.4552	-0.0173

Pricing as of: 7/23 8:52AM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Jul 10	206.1	-0.19%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

for that to change.

But while the rate hike itself is pointless, the Fed meeting will still be quite relevant. In fact, another piece of info coming out on Wednesday afternoon will likely be **the most important** data of the week.

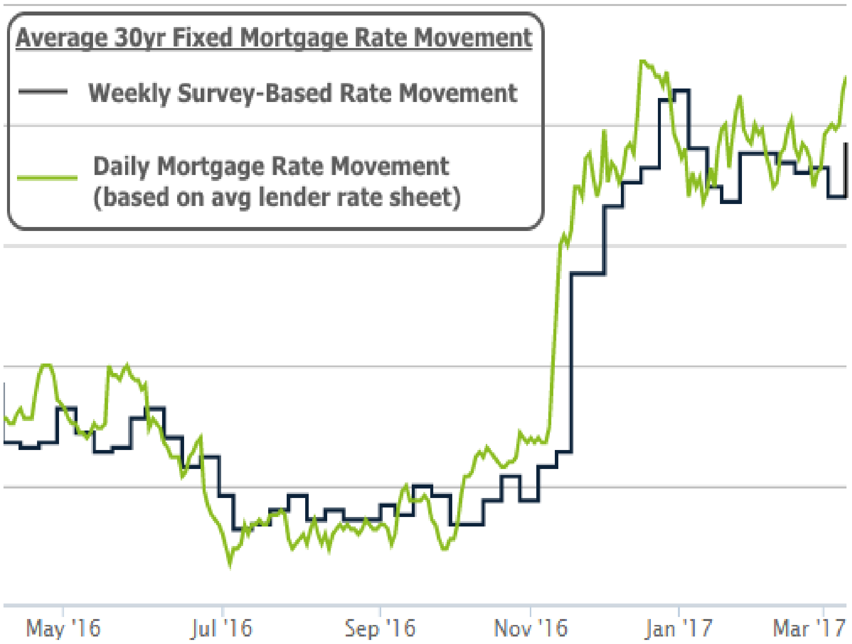
Along with the policy statement (where the Fed officially announces the hike), the Fed releases economic projections 4 times per year. Sometimes referred to as "the dots" (due to the dot plot used to convey some of the data), these projections are **critical** in shaping market expectations about Fed policy **beyond** Fed day itself.

It was the dots that rocked bond markets (and thus, rates) in mid December 2016 (after all, you can see in the chart above that financial markets were already pricing-in the hike). And it's the dots that will **likely dictate** the direction and pace of the next move in rates.

As for probabilities, it only makes sense to be prepared for longer-term rates (like mortgages) to move higher after the Fed announcement. But keep in mind that financial markets are always doing their best to adjust **today's** trading levels to reflect their best understanding of how the **future** will unfold.

That means today's interest rates are **not only** taking the Fed hike into consideration but **also** likely reflect expectations about changes in the Fed's projections. There's some possibility the Fed's rate hike outlook will accelerate less than markets expect. In that case, rates wouldn't necessarily be marching to their doom (this isn't a prediction... just a reminder that there's room for rates to move either way next week).

We've certainly seen plenty of upward movement recently, with average 30yr fixed mortgage rates hitting **2017 highs** this week. The rate spike is actually a bit worse than most news stories suggest because most news stories rely on Freddie Mac's weekly survey. Although the survey is accurate in the long run, it can lag day-to-day movement--especially in the second half of any given week. Here's how this week's actual movement stacks up:



As the chart indicates, rates are close to long-term highs. For the housing market, the timing is poor. Just this week, CoreLogic reported that its home price index expanded at a slower pace for the **first time in 6 months**. Price gains are expected to contract to an annual pace of 4.8 percent by next January vs 6.9 percent recorded through January 2017.

Despite rising rates and the shift in prices, the average American **remains upbeat about the housing market**. Fannie Mae's National Housing Survey showed a surge in home-buying sentiment to its best levels since record-keeping began in 2011.

In economic news this week, the Labor Department reported strong job growth, with **nonfarm payrolls** rising 235k. Analysts were officially expecting a 190k increase, but markets were prepared for something higher based on an earlier report from ADP. This meant rates made their biggest move higher on Wednesday and were then able to take Friday's numbers from the Labor Department in stride.

Update: Buyer Broker Agreement

After requests from real estate companies, a nonprofit consumer watchdog group the Consumer Federation of America has developed a list of factors to consider when creating a buyer contract in preparation for upcoming practice changes in the industry.

CFA released its “Proposed Criteria for Evaluating Home Buyer Contract Forms” on Tuesday. The 15 criteria focus on the contracts’ form — whether the documents are readable and understandable — and content — whether they are fair to homebuyers.

-the document’s expiration date (CFA recommends buyers asks for a three-month contract and never sign one longer than six months)
-the right to terminate the contract
-the disclosure that compensation is negotiable
-the broker’s compensation clearly stated and that the buyer broker can’t receive additional compensation for facilitating a sale
-that any additional fees, such as for showing a home, will be deducted from the broker’s commission if there is a successful sale
-that the commission is due only if there is a successful closing
-that buyers have an obligation — for no longer than 60 days, CFA recommends — to pay a broker who earlier showed them a home they purchased after the contract ended
-seller concessions paid directly to buyers
-dual agency not pre-approved by the contract
-an explanation of how a broker treats different buyer clients interested in the same property
-that buyers should not be required to first go through mediation or arbitration if they have a complaint
