## Rate Drama Stayed on Vacation After Long Weekend

For mortgage rates and broader financial markets beyond, the month of May has been **fraught with drama**. It began in late April after global rates markets had been holding a low, narrow range. At the time, European bond markets hadn't yet come down from the sugar rush fueled by the start of sovereign bond-buying in March. (That's Europe's version of the Fed's quantitative easing program, which purchased Treasuries and Mortgage-Backed-Securities).

European rates had **defied expectations** by continually pushing to new all-time lows day after day. There was so much momentum behind the move that it made little sense for traders to try to swim against the current. The excessive move also meant that markets were more than ready to move in the other direction when the time came.

And that brings us back to late April and early May. That was when the time came for traders to get off the **crazy tidal wave of lower rates**. They frantically swam in the other direction. It sounds a bit chaotic, but it was simply a loud version of a familiar tune.

The drama continued at least through the beginning of last week, with US interest rates still very close to the highs of the year. But from the middle of last week through the current week, things have **calmed down immensely**. In 10 short days, we've gone from the highest rates of the month to very near the lowest.

Traditionally, rate movements get their cues from economic data, but that's **just not the case** right now. While it's true that there are a few mild reactions to a few reports, they simply amount to noise. In the bigger picture, markets are trying to determine if the recent drama was merely an aftereffect of the impressive drop in rates over the past 16 months or if it was the first step in a massive reversal in global interest rate momentum. In other words, we need to know if drama was merely on vacation or if it's gone indefinitely.

Even though we just discussed the lower relative importance of economic data, the events coming up next week **are an exception**—especially Friday's big jobs report. But if drama is indeed returning from an extended vacation, we'll likely know it before Friday.

## National Average Mortgage Rates

	Rate	Change	Points
--	------	--------	--------

### Mortgage News Daily

30 Yr. Fixed	7.10%	+0.01	0.00
15 Yr. Fixed	6.57%	+0.01	0.00
30 Yr. FHA	6.64%	+0.02	0.00
30 Yr. Jumbo	7.35%	0.00	0.00
5/1 ARM	7.30%	0.00	0.00

### Freddie Mac

30 Yr. Fixed	7.02%	-0.42	0.00
15 Yr. Fixed	6.28%	-0.48	0.00

Rates as of: 5/20

## Market Data

	Price / Yield	Change
MBS UMBS 6.0	100.38	-0.02
MBS GNMA 6.0	100.73	-0.04
10 YR Treasury	4.4428	+0.0205
30 YR Treasury	4.5797	+0.0187

Pricing as of: 5/20 12:39PM EST

## Recent Housing Data

		Value	Change
Mortgage Apps	May 15	198.1	+0.51%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%

Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

Housing-Specific Updates

There were several **big developments** in housing news this week. On the financing side of the equation, the week’s biggest news concerns changes made to **underwriting policies by Fannie Mae**. It had long been the case that any revolving credit accounts that had to be paid down in order to qualify ALSO had to be closed. In one way, this made sense because a borrower could simply run the balances back up after closing and have monthly bills that were higher than Fannie would have otherwise allowed. In another way, this was a silly policy that implied mistrust of borrowers and did real damage to their credit scores in the long run (given that a major component of one’s credit score is the length of time an account has been established). With this week’s changes, borrowers will no longer have to close those accounts!

The other big news this week was the surge in **Pending Home Sales**. NAR reported that their index, which tracks contract signings on existing homes, rose to its highest level since May 2006. [Full Story](#)
